## **Chapter-I**

### **INTRODUCTION**

- 1.1 The telecommunications landscape in India is presently undergoing a momentous and far-reaching transformation, propelled by the emergence of state-of-the-art network architectures and services. The rapid advancement of communication technologies has not only paved the way for the provision of swifter, more streamlined, and economically sustainable services to consumers but has also opened new avenues for revenue generation for operators. The remarkable capacity to seamlessly deliver services across a multitude of devices, irrespective of time and geographic constraints is increasingly transitioning from mere aspiration to tangible reality. In this era of cutting-edge communication technologies, such as Machine-to-Machine (M2M) communication, Internet of Things (IoT) devices, and the paradigm-shifting capabilities of 5G networks, the transformation of India's telecommunications landscape takes on a new dimension. These transformative technologies enable an unprecedented level of interconnectedness, where devices and objects can autonomously exchange information and seamlessly interact with one another, creating a hyper-connected ecosystem of devices, services, and users. The integration of M2M communication and IoT devices into the telecommunications fabric empowers businesses and individuals alike to leverage the power of real-time data exchange, automation and intelligent decision-making, revolutionizing industries across sectors such as healthcare, transportation, agriculture, and manufacturing.
- 1.2 Furthermore, the advent of 5G networks brings forth a new wave of possibilities, with its ultra-high-speed connectivity, low latency, and

massive device connectivity capabilities. This fifth-generation network technology not only enhances the speed and efficiency of data transmission but also lays the foundation for transformative use cases such as autonomous vehicles, augmented reality (AR), virtual reality (VR), smart cities, and remote robotic surgeries. Industry 4.0 will further see rise of interconnected workplaces and manufacturing setups. The ubiquitous connectivity offered by 5G networks, coupled with the proliferation of IoT devices, creates an intricate web of interconnectedness, where devices, sensors, and systems if distinctly identified in the network can seamlessly communicate and collaborate, resulting in a highly efficient, intelligent, and responsive ecosystem.

- 1.3 In relentless pursuit of universal accessibility, the aspect of numbering resources and its judicious allocation that is often relegated to background, assumes an indispensable role in distinctly identifying end-users. In this interconnected landscape, where billions of devices and users are seamlessly integrated, the allocation and utilization of unique numbers become instrumental in ensuring efficient communication and effective management of the network. The ability to uniquely identify and distinguish each end-user, regardless of the device or technology they employ, guarantees the smooth flow of information, seamless service provisioning, and optimal utilization of resources. Therefore, as India's telecommunications landscape undergoes this profound metamorphosis, driven by cutting-edge network architectures and the convergence of technologies like M2M communication, IoT, and 5G, the role of numbering resources gains even greater significance. These resources serve as the bedrock for universal accessibility, enabling the efficient and reliable delivery of services to consumers,

businesses, and industries alike in this era of transformative communication technologies.

- 1.4 Telecommunication identifiers serve as crucial identifiers for basic and value-added services through switched telephone networks. The purpose of a numbering plan is to ensure a structured approach to allocating telecommunication identifiers resources, in line with international best practices. It primarily defines the numbering space and its evolution for existing and potential services, aiming to accommodate a wide range of services and facilitate efficient expansion without premature depletion. The plan establishes general principles for managing telecommunication identifiers resources, including allocation, assignment, and management guidelines. It emphasizes efficient resource management, equitable distribution among service providers based on need, and the promotion of competition and innovation. Any modifications to the plan should minimize disruption to existing telecommunication identifiers and prioritize long-term stability, reducing the need for future changes.
- 1.5 In India, the Department of Telecommunications (DoT) is the custodian of telecommunication identifiers resources, and it oversees their allocation for both fixed and mobile networks, keeping in mind the recommendations of the International Telecommunication Union's (ITU) Telecommunication Standardization Sector (ITU-T). These globally recognized standards, encapsulated as ITU-T Recommendations, form the foundation of the global architecture of information and communication technologies (ICTs). Specifically, ITU-T Recommendation E.164 within Series E of ITU-T Recommendations outlines the international public telecommunication numbering plan,

explaining the structure and functionality of numbers assigned for international public telecommunication.

- 1.6 The efficient management and judicious utilization of numbering resources in the country is governed by the National Numbering Plan (NNP), an essential pillar among other fundamental plans such as Switching, Routing, Synchronization Plans that ensure the smooth operation of telecommunications networks. Over the years, the Department of Telecommunications (DoT) in India has formulated and implemented national number plans to effectively manage and allocate numbering resources in the telecommunications sector. Each plan has been meticulously crafted to address the evolving needs of the industry and accommodate the growing demand for communication services. One of the notable NNP issued by the DoT was in 1993, which marked a significant milestone in response to the rapid expansion of telecommunication services and the liberalization of the sector for private participation. This plan was designed to rationalize and enhance the flexibility of the numbering system by ensuring that it could effectively cater to the nation's requirements for the next three decades. By streamlining the allocation and assignment of numbers, this plan aimed to facilitate the seamless provision of telecommunication services and enable the identification and differentiation of end-users. It served as a crucial foundation for the subsequent development and growth of the telecommunications industry in India.
- 1.7 In 2003, the DoT undertook another comprehensive review and revision of the national number plan to accommodate the exponential growth of subscribers. This visionary plan, known as the National

Numbering Plan 2003<sup>1</sup>, was formulated to allocate numbering space for 750 million telephone connections. Aligned with projections to achieve a 50% tele-density by 2030, the plan took into account the anticipated surge in demand for telecommunication services. NNP 2003 was envisaged to meet the challenges of Multi-Operator, Multi-Service environment and aimed to be flexible enough to meet the numbering requirements for the next 30 years without any change in its basic structure. The plan covered the numbering requirements of Basic, Cellular mobile and new telecom services and considered the allocation of different digits to enable user friendly dialing and uniform digit lengths. Some of the salient features of the National Numbering Plan are as follows:

- The dialing procedure as per ITU-TE.164 was followed.
- A Short Distance Charging Area (SDCA) based Linked Numbering scheme for basic services was followed.
- National (Significant) Number [N(S)N] was kept 10 digits for both the basic as well as cellular mobile services.
- The subscriber number (SN) for basic services will be 6, 7 or 8 digits depending upon the SDCA code.
- There was no change in the cellular mobile numbering structure.
- Levels 0, 1, 7, 8 and 9 were not to be used as first digit for exchange codes.
- Carrier Access Code (CAC) for National Long Distance (NLD) and International Long Distance (ILD) was defined as '10'.
- Separate Carrier Identification Codes (CIC) were earmarked for toll and non-toll quality NLD and ILD services.
- All the service providers were to use 100, 101 and 102 for

---

<sup>1</sup>[https://dot.gov.in/sites/default/files/nnp2003\\_0\\_0.pdf?download=1](https://dot.gov.in/sites/default/files/nnp2003_0_0.pdf?download=1)

Police, Fire and Ambulance uniformly.

- IN service access, codes were shifted from 16XX to 18XX.
- Trunk services codes were shifted from 18X to 150X.
- Certain level 1 codes were earmarked for all service providers to offer various subscriber related services as per their wishes.
- Voice Mail services access code was shifted from 93 to 170.

1.8 By strategically allocating numbering resources, NNP 2003 laid the groundwork for sustained expansion and ensured that the industry had sufficient capacity to meet the evolving communication needs of the nation. The national number plans of 1993 and 2003 were not drafted in isolation. Rather they worked in harmony with various other fundamental plans such as Switching, Routing, and Synchronization to orchestrate the seamless functioning of telecommunications networks.

1.9 The formulation and implementation of these national number plans underscored the DoT's commitment to ensuring a systematic approach to the allocation and assignment of numbers. By harmonizing with international best practices, these plans aimed to establish a robust and efficient numbering framework that could cater to the burgeoning demands of existing services and the introduction of nascent technologies. While these plans were designed with long-term perspectives, they required careful and meticulous reviews to consistently align with the evolving needs of the nation as telecommunication networks expand and technological advancements unfold. Numbering resources, like spectrum resources for wireless services, are finite, dependent on the intricacies of the numbering plan's design, and may require periodic revisions due to unforeseen growth or the introduction of innovative services. The

pivotal role of numbers in telecommunications is widely recognized, emphasizing the need for a carefully crafted numbering plan that ensures a systematic approach to the allocation and assignment of numbers, in line with international best practices. Such a plan must effectively accommodate the growing demands of existing services and the introduction of new services without prematurely depleting resources, particularly considering the increased demand driven by convergent services, smart devices, machine-to-machine communication, and premium services.

1.10 TRAI's recommendations on "*Ensuring Adequate Numbering Resources for Fixed Line and Mobile Services*" dated 20.9.2020 addressed the growing demand for numbering resources in the telecommunications industry. The recommendations proposed techniques like number pooling to optimize resource allocation and utilization. It emphasized monitoring mechanisms, a centralized database, and stakeholder collaboration for effective management. These recommendations aimed at facilitating seamless provision of services while ensuring transparent and sustainable allocation of numbering resources. TRAI, inter-alia, recommended that a revised and new NNP should be issued at the earliest.

1.11 In recent years, the availability of numbering resources is facing challenges due to the significant expansion of services and a substantial increase in the number of connections in both the fixed line as well as in mobile segment. With a current total of 1199.28 million telephone subscribers and a tele-density of 85.69% as of the end of March 2024<sup>2</sup>, there is a need to carefully examine the utilization of numbering resources and implement judicious policy

---

<sup>2</sup> [https://www.trai.gov.in/sites/default/files/PR\\_No.23of2024\\_0.pdf](https://www.trai.gov.in/sites/default/files/PR_No.23of2024_0.pdf)

decisions to ensure an adequate reservoir for the sustainable growth of telecommunication services.

1.12 In this background, TRAI received a reference dated 29.09.2022 from DoT ([Annexure-I](#)), soliciting recommendations for a revised NNP to address the current and potential future challenges concerning the availability of adequate fixed line numbering resources arising from rapid growth in the telecommunications sector. This request aligns with para 4.11 (a) of TRAI recommendations (accepted by DoT) as quoted at para 1.10 above, wherein TRAI had, inter-alia, recommended that a revised and new NNP should be issued at the earliest. DoT vide reference letter has, inter-alia, conveyed that: -

- (i) DoT has received requests from Telecom Service Providers (TSP), for additional fixed line resources. There may be wire-line numbering resource constraints in Gurgaon and Noida/ Ghaziabad as well as in some other parts of country. A graded utilization criterion, similar to mobile numbering resources allotment, has been introduced for wireline. To address the present and possible future constraints related to availability of adequate fixed line numbering resources arising out of rapid growth, a review of the fixed line numbering plan is required. Considering the competitive tariff plans offered by Access Service Licensees at LSA and Pan-India level, TRAI may examine the requirement for continuing with SDCA based Numbering Plan Area (NPA) as defined in NNP- 2003 or could be to go for LDCA based numbering scheme from the present SDCA based numbering scheme.
- (ii) DoT is getting large number of requests from Govt. and non-government organization for allocation of short codes. TRAI

may examine global best practice and provide recommendations on effective use of precious numbering resources for level '1' services in context of requirement of the country.

(iii) Further, the numbering plan aspects and allocation criteria related to following services may also be considered in revised NNP: -

- a. Allocation of MCC and MNC for Captive Network Non-Public (CNPN)
- b. M2M numbering resources
- c. Signaling Control Point (SCP) codes
- d. National Signaling Point (SP) Codes for SS& signaling
- e. Intelligent Network Services like free phone, Premium rate service, international free phone etc.
- f. Number portability codes
- g. Any other number based emerging services

1.13 As DoT is the sole custodian of numbering resources and the entire information related to allocation and use of the numbering resources is available with DoT, TRAI requested DoT to provide the currently held data sets on fixed line numbering resource allocation, allocation and utilization of mobile numbering resources, current allocation and utilization of short codes, Signaling Point codes etc. TRAI also undertook interactions with various TSPs to comprehend the constraint areas as regards numbering resource allocation vis-à-vis its utilization along with possibility of migrating from the existing SDCA based Numbering Plan Area (NPA) to any other feasible numbering scheme.

1.14 In this background TRAI has decided to issue this Consultation Paper (CP) with an objective to examine all aspects impacting the allocation and utilization of numbering resources along with proposing modification (if any) towards currently in vogue SDCA based fixed-line numbering scheme and pinpoint strategies for effectively managing constraints in its allocation policies and utilization procedure to ensure availability of ample numbering resources. This consultation paper is divided into three chapters. This initial chapter i.e. Chapter 1 provides an overview of the context in which this consultation has been initiated. The second chapter delves into the existing allocation criteria for numbers along with its associated issues and explores constraint areas with possible measures for the effective utilization of numbering resources. The final chapter summarizes the questions open for consultation.

## **Chapter-II**

### **Telecommunication Identifiers, their allocation, utilization and constraints**

- 2.1 The development of a strategy for overseeing telecommunication identifiers must take into account the legitimate requirements of diverse stakeholders. Any modifications to the plan involve substantial adjustments and expenses in network infrastructure, prompting service providers to underscore meticulous management of telecommunication identifier resources. Frequent alterations to the plan for overseeing telecommunication identifiers require subscribers to adapt their dialing habits and reprogram their mobile phones and phone books. Inaccurate or incomplete dialing contributes to network congestion and revenue loss. A standardized dialing pattern across the country and among service providers, along with meaningful numbers denoting location and call costs, enhances user-friendliness. Business subscribers, in particular, find changing numbers costly due to the necessity to update advertising materials, stationery, and forms.
- 2.2 As highlighted in the preceding chapter, the strategy for overseeing telecommunication identifiers establishes regulations and principles for assigning numbers to various telephone services operating on public networks. It covers the allotment of numbers for various services, including international services, trunk services, emergency services, toll-free services, and Intelligent Network (IN) services. The national numbering plan adheres to relevant ITU-T Recommendations, ensuring each subscriber receives a unique and identifiable number, regardless of their network connection. The telecommunication identifier management plan ensures that

subscribers are assigned distinct telephone numbers, facilitating the identification of their geographical location and service provider. The DoT diligently monitors the utilization and reallocation of numbering resources, thereby facilitating interconnection and the routing of long-distance calls within and between License Service Areas (LSAs).

- 2.3 Plan to manage telecommunication identifiers plays a critical role in telecom networks. A numbering plan can adopt a closed or open system. In a closed system, the number of digits dialed remains consistent for all calls, whereas an open system may require varying digits for local and national calls. The plan refers to National Significant Numbers (NSNs), with the national code (N) and subscriber number (SN). Local dialing involves dialing only the SN to connect with another user in the same local area. Plans to manage telecommunication identifiers may adopt geographical or non-geographical schemes, or a combination of both, depending on the services provided. The plan should include service access codes for Intelligent Network services, Toll-Free services, and potential future services. Separate codes are required for Home Country Direct, International Toll-Free, premium rate, mobile satellite services, etc., which should be specified in the plan to manage telecommunication identifiers. Additionally, the plan mandates common numbers for emergency services such as fire brigade and police across all telecom service providers, ensuring convenient access for users.
- 2.4 The subsequent paras discuss various telecom identifiers that the DOT reference to TRAI specified. The challenges associated with these identifiers, if any, and the possible solutions are also being discussed. Accordingly, questions are raised for seeking stakeholders' comments.

## **A. Fixed Line Numbering Resources**

2.5 While the Access Service licenses in India are traditionally given LSA (License Service Area) wise, the telecom Network has been divided area wise as:

- **SDCA**---- Short Distance Charging Area now called Local area.
- **LDCA**---- Long Distance Charging Area comprising of several SDCAs.

ITU-T Recommendation E.164 provides four options for the National Destination Code (NDC) structure. India has adopted type 2 for Public Switched Telephone Network (PSTN) where NDC is the Trunk (Area) code assigned to each SDCA<sup>3</sup>. Each SDCA is allotted a unique Trunk code. There are 2645 SDCAs distributed out of 322 LDCAs. The Indian Telecom Network Numbering is based on SDCA link Numbering Scheme. Accordingly, 2645 codes would be required to cover the entire country, based on the SDCA link Numbering Scheme. The length of the SDCA Code varies from 2 to 4 depending upon the size and telephone density requirements of the SDCA. NNP 2003 envisaged that with increase of N(S)N to 10 digits, the present Scheme of SDCA link Numbering will be sufficient to cater for futuristic demand of more than 30 years. The telephone number for basic/fixed services thus, has three components each requiring a country code (CC), NDC, and Subscriber Number (SN). NDCs consist of 2/3/4 digits while SNs are 6/7/8 digits respectively. Local calls within an SDCA require 6 to 8 digits for dialing, while national long-distance calls need a 10-digit format (SDCA code + SN) with a dialing prefix '0'.

---

<sup>3</sup>[https://www.itu.int/rec/dologin\\_pub.asp?lang=e&id=T-REC-E.164-201011-I!!PDF-E&type=items](https://www.itu.int/rec/dologin_pub.asp?lang=e&id=T-REC-E.164-201011-I!!PDF-E&type=items)

- 2.6 Within the domain of fixed-line networks, encompassing wired connections employing either copper or fiber optic cables, circuit-switching technology assumes a pivotal role. NNP 2003 was made keeping in mind this technology and the related routing plan. This advanced technological framework orchestrates the establishment of exclusive communication channels throughout the duration of a telephonic conversation. Local Exchanges (LEs) serve as pivotal switching hubs, adeptly facilitating seamless connections within the confines of the same Short Distance Charging Area (SDCA). In the context of a specified Licensed Service Area (LSA), the complexities of routing are meticulously overseen by LEs. These entities, with impeccable efficiency, direct telephonic exchanges among subscribers within their territorial jurisdiction. To initiate and sustain these connections, LEs rely upon complex signaling protocols, with SS7 (Signaling System 7) being most commonly used.
- 2.7 In the traditional TDM based circuit switched network, each SDCA has one or more number of exchanges. These started as standalone exchanges located within SDCA, but later, with introduction of new technology exchanges, in most SDCAs, got converted into remote switching units of main exchanges that were located elsewhere. Each LDCA had a Long-Distance Charging Centre (LDCC) called Trunk Automatic Exchange (TAX). Normally each SDCC is an integrated local-cum-tandem or a transit switch. In certain cases, SDCC (Short Distance Charging Center) itself may also be LDCC. Each SDCA normally covers one or more taluka or other administrative areas. In India, SDCAs forms the basic *Numbering Plan Area* (NPA) for fixed line resources. Numbers in an NPA are not duplicated and are called “subscriber numbers”. To make a call from one subscriber to another

subscriber in the same NPA, only the subscriber number needs to be dialed. All other SDCA are accessible by dialing N(S)N with '0' prefix and SDCA code.

- 2.8 The traditional Time Division Multiplexing (TDM) based circuit-switched networks have yielded to the evolution of technology, giving rise to IP-based packet-switched core networks. With this technological advancement, a singular soft switch can supplant a multitude of autonomous TDM-based switches, necessitating solely the presence of Access/Line Media Gateway (LMG) and Trunk Media Gateway (TMG). Notably, it becomes feasible for a solitary soft switch to accommodate the requirements of one or more than one Licensed Service Area (LSA). By letter dated 23rd June 2017<sup>4</sup>, DoT has amended the provisions articulated in Clause 4.5 of Unified License (UL), pertaining to the location of switches and other network elements, as follows -

*“The Licensee may deploy any of its equipment anywhere in India subject to the interconnection points being located and operated in the respective service areas for inter operator, inter service area, NLD & ILD calls and meeting the security conditions as mentioned in the license.”*

This empowers the licensee to furnish all categories of services under the license from their switch/equipment situated anywhere in India.

- 2.9 The Department of Telecommunications (DoT) in its reference dated 29.09.2022 expressed concerns regarding current and anticipated constraints related to the availability of ample fixed line numbering resources, citing rapid growth as a primary factor. DoT stressed the imperative need to review the fixed line numbering plan, intending to undertake consultation with stakeholders for the same. Furthermore,

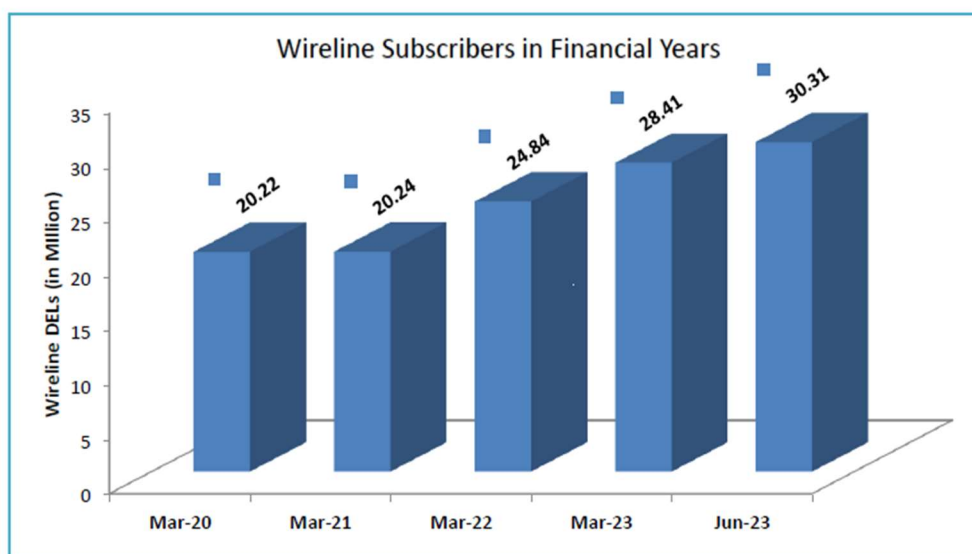

---

<sup>4</sup><https://dot.gov.in/sites/default/files/Amendment%20to%20Unified%20License.pdf?download=1>

DoT highlighted the importance of assessing the feasibility of either retaining the present SDCA-based Numbering Plan Area (NPA) from NNP-2003 or transitioning to an LDCA-based numbering scheme, considering competitive tariff plans offered by Access Service Licensees at the LSA and Pan-India levels.

2.10 To understand the concerns related to fixed-line numbering resources, one must look at the allocation and corresponding utilization of these resources. The use of number of wireline resources have been on an increasing trend since March 2020. Total Wireline Subscribers (Urban + Rural)<sup>5</sup> in last four financial years and as on 30th June 2023 is shown below: -

**Figure 2.1: Wireline Subscriber Base Statistics**

2.11 To carry out a thorough analysis, TRAI sought data from the DoT as well as from Telecom Service Providers (TSPs). The data so obtained, delineating the SDCA-wise distribution of available telecommunication identifier resources, their apportionment among Telecom Service Providers (TSPs), and their corresponding utilization,

<sup>5</sup>These include the numbering resources allocated for SIP trunk and PRI lines.

which outlined the distribution of telecommunication identifier resources on SDCA basis. The analysis of this data brings out the following issues of concern:

## **I. Shortage Of Telecommunication Identifier Resources in Certain SDCAs**

2.12 Detailed examination of SDCA-wise data as received from the DoT indicates that the utilization of numbering resources remains generally low across all TSPs in any given SDCA, with only 2 to 3 TSPs demonstrating higher utilization in select SDCAs. Few TSPs are currently grappling with insufficiency of telecommunication identifier resources, particularly in 12 SDCAs (as specified at table 2.1 below), where the utilization of allocated telecommunication identifier resources for fixed line has crossed over 70% for one or more TSPs. The data also suggests that the remaining TSPs are exhibiting a lower utilization across all SDCAs, including the specified 12 SDCAs (**Annexure-II**). The combined utilization of all TSPs in these 12 SDCAs is presented in table 2.1 below. The data reveals that adequate numbering resources for fixed lines are available in these SDCAs if all TSPs are considered together, however, individually the TSPs are facing shortages due to poor utilization by some other TSPs who have been allocated telecommunication identifiers in these SDCAs.

**Table 2.1: TSP Wise Percentage Utilization in 12 SDCAs**

<u>SDCA CODE</u>	<u>SDCA NAME</u>	<u>LSA</u>	<u>% Utilization</u>						
			<u>TSP-1</u>	<u>TSP-2</u>	<u>TSP-3</u>	<u>TSP-4</u>	<u>TSP-5</u>	<u>TSP-6</u>	<u>TSP-7</u>
8554	ANANTAPUR	Andhra Pradesh	4	---	71	---	16.44	8.21	---
6542	BOKARO	Bihar	4	---	74	---	19.48	---	---
124	GURGAON	Haryana	73	---	33	2.52	25.36	---	54.57
7752	BILASPUR	Madhya Pradesh	18	---	86	---	8.62	---	---
172	CHANDIGARH	Punjab	15	93	32	---	20.77	5.81	---
1765	NABHA	Punjab	3	72	7	---	10.56	1.43	---
1762	RAJPURA	Punjab	32	93	78	---	16.81	6.93	0.19
1482	BHILWARA	Rajasthan	5	---	74	---	11.92	12.88	---

120	GHAZIABAD +DADRI	Uttar Pradesh-West	72	---	84	---	10.01	---	---
1334	ROORKEE-II (HARIDWAR)	Uttar Pradesh-West	7	---	83	---	16.63	---	---
3222	KHARAGPUR	West Bengal	2	---	75	---	8.42	---	---

## **II. Present Criterion for allocation of additional wireline resources seems too liberal**

2.13 DoT vide its OM No16-03/2018-AS-III/MSD dated 08 August 2022 had issued its amended criterion for allocation of additional wireline resources. The same is reproduced in table 2.2 below for reference:

**Table 2.2: Fixed Line Resources Allocation Criterion by DoT**

<u>Sr No</u>	<u>Wireline Numbering Resource Allotted</u>	<u>Minimum subscriber activation required for seeking additional numbering resources</u>
1.	10,000 to less than 50,000	50%
2.	50,000 to less than 1,00,000	55%
3.	1,00,000 to less than 5,00,000	60%
4.	5,00,000 to less than 10,00,000	70%
5.	10,00,000 and above	80%

2.14 It is noteworthy that, in contrast to mobile services, the expansion of the fixed-line subscriber base progresses at a relatively sluggish pace. This is primarily attributed to the low demand for the service and the infrastructure building time and costs involved. To illustrate the point further, let us consider the case of a service provider with an allocation of 1,00,000 or more but less than 5,00,000 wireline numbering resources. According to the specified criteria, the eligibility for allocating additional resources for such TSP is at 3,00,000 subscribers i.e. when it still has a reserve of 2,00,000 numbering resources. Providing 2,00,000 wired-line numbers may take years. However, the present allotment criteria, being liberal, would allow a service provider to get further numbering resources allocated. The service providers will always be interested in getting more numbering resources allocated as they are able to sell the vanity numbers. Thus, the present allotment criteria promote inefficient use of telecommunication identifiers. Even if we consider smaller SDCAs, the growth of fixed-line services is expected to be considerably slower and adding 25,000 new wired-line connections may take considerable time in such SDCAs. Clearly there is a need to implement more stringent criteria for the allocation of new wireline resources.

2.15 The allocation of additional sub-levels for fixed-line services is contingent upon the utilization of previously allocated sub-levels. The complete procedure for allocating additional sub-levels involve multiple stages and is time-consuming. The access service provider must first obtain certification from the respective DoT LSA unit for their utilization report, submitted in the prescribed format (as shown below in Table 2.3). Subsequently, the service provider submits its requisition for additional sub-levels to the Access Service Division of

DoT, along with the certified utilization report from the LSA unit. Only after analysing the requests of the TSPs does DoT HQ allocates additional sub-levels. Hence, this process is both lengthy and time-consuming. If the process can be shortened, a more stringent allocation criteria can very well serve the needs of the TSPs. Given the expansion of telecommunication access services in India, there is a critical need to effectively oversee the management, including the allocation and utilization, of telecommunication identifier resources for access services.

**Table 2.3: Format for data submission to obtain certification by the concerned LSA unit.**

S. No.	SDCA	Wireline level allocated (L)	Wireline Numbers allocated (M)	Date of allocation	Numbers utilized (N)	% utilized (N/M)

2.16 To enhance the efficiency in allotment of additional numbering resources, the DoT, vide OM No. 16-02/2022-AS-III/NRMS/2/ dated 31.01.2023<sup>6</sup> has already declared that the allocation of numbering resource will take place through the Saral Sanchal Portal. Presently, allocation of wireline codes, MSC codes and M2M codes are being processed via Numbering Resource Management System (NRMS) module in Saral Sanchal Portal.

<sup>6</sup><https://dot.gov.in/sites/default/files/Saral%20Sanchal%20Portal.pdf?download=1>

### III. SDCAs Having Zero or Less Than 100 Wired Line Subscribers

2.17 Upon further examination of the SDCA-wise data provided by the DoT, it is evident that out of the total 2645, 58 SDCA have '0' subscribers and 275 SDCA have less than 100 fixed line subscribers (refer table 2.4below). Additionally, approximately 1722 out of 2645 SDCA exhibit a utilization rate of less than 1%. Moreover, the combined utilization of numbering resources of TSPs in rest of the SDCA has not yet surpassed the 50% utilization mark.

**Table 2.4: No. of SDCA based on the numbers allocated by all TSPs.**

Sl. No.	Numbers allocated by all TSPs in any given SDCA	No. of SDCA	Remark
1	0	58	No numbering resource allocated to any subscriber by any TSPs (i.e <b>0% Utilization</b> )
2	1 to 99	275	Total 13219 numbering resources allocated to subscribers by all TSPs in 275 SDCA ( <b>less than 0.06% utilization for combined resources of all TSPs</b> )
3	100 to 999	979	Total 413089 numbering resources allocated to subscribers by all TSPs in 979 SDCA ( <b>less than 1% utilization for combined resources of all TSPs</b> )
4	1000 to 9999	816	Total 2893051 numbering resources allocated to subscribers by all TSPs in 816 SDCA ( <b>less than 4% utilization for combined resources of all TSPs</b> )
5	1 lac to	452	-

	99,999		
<b>6</b>	10 lacs to less 10 million	54	-
<b>7</b>	Above 10 million	11	-

2.18 Clearly the codes allocated for SDCAs having zero subscribers are getting blocked and the associated numbering resources are being wasted. Also, the SDCAs where the number of subscribers is less than 100, the numbering resources associated with codes of such SDCAs are grossly under-utilized. If these SDCAs are merged with nearby SDCAs and the codes for these areas are reassigned elsewhere, the numbering resources can be utilized more efficiently, while the impact on subscribers would be negligible.

#### **IV. Disparity in Utilization Figures of Fixed-Line Telecommunication Identifiers Reported by TSPs To DoT and TRAI Respectively**

2.19 Recent analysis of monthly wireline subscriber reports from various TSPs when compared with data received from the DoT, has uncovered significant disparities. For some TSPs, there is a substantial difference between the utilization of numbering resources reported to DoT and the actual number of subscribers reported to TRAI. The difference between the numbering resources allocated by TSPs (according to DoT furnished data) and the actual fixed-line subscribers as reported by TSPs to TRAI indicates a significant difference in allocation of telecommunication identifiers by TSPs (as shown in Table 2.5 below).

**Table 2.5: Difference between numbers allocated& reported by TSPs**

Sl. No.	Name of TSPs	Fixed line number allocated by TSPs as on 31.12.2022 (data provided by DoT) 'X'	Fixed line Subscriber Data reported by TSP In TRAI as on 31.12.2022 'Y'	Difference (X-Y)
1	TSP-1	1,73,36,616	67,85,991	1,05,50,625
2	TSP-2	1,25,62,402	15,70,379	1,09,92,023
3	TSP-3	93,82,257	71,04,416	22,77,841
4	TSP-4	84,65,045	7,16,787	77,48,258
5	TSP-5	83,75,947	84,01,774	- 25,827
6	TSP-6	26,56,227	1,48,544	25,07,683
7	TSP-7	21,46,665	-	21,46,665
8	TSP-8	15,87,564	3,18,346	12,69,218
9	TSP-9	3,61,467	24,08,590	-20,47,123
<b>TOTAL</b>		<b>6,28,74,190</b>	<b>2,74,54,827</b>	<b>3,54,19,363</b>

**V. Bulk Allocation of Telecommunication Identifiers by Few TSPs For Providing Session Initiation Protocol (SIP) Trunks and Primary Rate Interface (PRI) Based Services.**

2.20 The lack of explicit guidelines for allocation of numbering resources by TSPs to SIP trunks and PRI customers has resulted in a notable trend where certain TSPs assign substantial blocks of numbering resources to enterprise clientele. The numbering indicators of fixed line allotted to SIP customers along with the number of SIP customers (retail and enterprise) for some of the major Telecom Service Providers is shown in table 2.6 below. This practice has the potential to limit the availability of numbering resources in the Service Delivery Area. It is worth noting that the resources for fixed

lines, while sufficiently available in most SDCAs, are not limitless. Consequently, unrestrained allocation without adequate checks and balances poses a tangible risk of creating a scarcity of numbering resources. Another critical concern relates to the potential misuse of these resources for Unsolicited Commercial Communication (UCC).

**Table 2.6: Number of SIP customers and TI of fixed line allotted to SIP customers.**

Sl. No.	Name of TSPs	No. of SIP Customers (including retail and enterprise customers) served by TSPs (including its VNOs) as on 31st January 2024	Total numbering indicators of fixed line allotted to retail and enterprise SIP customers by TSPs (including its VNOs) as on 31st January 2024
		<b>A</b>	<b>B</b>
1	TSP-1	3,953	13,31,048
2	TSP-2	2,819	6,17,180
3	TSP-3	2411	4,18,238
4	TSP-4	5,925	8,57,586
5	TSP-5	809	5,24,891
6	TSP-6	592	1,25,675
7	TSP-7	154	4,620
8	TSP-8	46	24,179
9	TSP-9	0	-
	<b>TOTAL</b>	<b>16,709</b>	<b>39,03,417</b>

## **B. Viable Options to Address the Future Constraints on Availability of Adequate Fixed Line Numbering Resources.**

### **I. Utilization of Spare SDCA Codes**

- 2.21 The National Numbering Plan 2003 includes a complete inventory of spare codes (Annex-III of NNP 2003). Among these, the 2-digit spare codes that can be prospectively utilized are '39,' '50,' '60,' and '70' respectively. However, MSC codes starting with '60' and '70' has already been allocated to TSPs and there are mobile numbers starting with '60' and '70' and hence, only the '39' and '50' as spare codes can be used for assigning it to SDCAs. SDCA codes facing constraints in numbering resources, such as Ghaziabad and Gurugram SDCAs, have the option to transition from their existing three-digit SDCA code to any of the above proposed 2-digit spare codes. This transition would generate additional numbering resources, increasing the capacity of each Telecommunication Service Provider (TSP) by almost tenfold. However, the implementation may pose challenges, as it would necessitate changing subscriber numbers from the existing 7 digits to 8 digits.
- 2.22 As has been discussed previously there are 58 SDCAs where there are currently no wired-line subscribers. These SDCA codes can be withdrawn and utilized for allocation in multiple ways. This will generate ample numbering resources. For example, these codes can be allocated as MSC codes provided that the codes commence with '9,' '8,' '7,' or '6.' However, these SDCA codes would need to undergo a merging process with adjacent SDCA codes. Any potential challenges associated with this process should be discussed with stakeholders before withdrawing SDCA codes with zero subscribers.

## II. (a) Spare Sub-Level

2.23 DoT allocates numbering sub-levels for wireline services to TSPs on the request of TSPs meeting the criterion for allocation of additional resources as per DoT OM No16-03/2018-AS-III/MSC dated 08 August 2022. Level 2 and 4 and various sub-levels of 3, 5, 6, and 7 are being used for wireline services. The allocation of levels and sub-levels to TSPs and number of subscribers for each TSPs is tabulated below: -

**Table 2.7: Levels/ Sub-Levels, LSA/ Area Of Operation, And Number Of Fixed-Line Subscribers As On 31.10.2023**

Sl. No	Levels	TSP	Allocation in Pan-India or certain LSAs <sup>#</sup>	Number of subscribers as on 31 <sup>st</sup> October 2023(in million)
1	Level '2'	BSNL/ MTNL	All India/ Delhi & Mumbai	8.441
2	Level '4'	Bharti Airtel	Andhra Pradesh, Assam, Bihar, Delhi, Gujarat, Haryana, Himachal Pradesh, Jammu & Kashmir, Karnataka, Kerala, Kolkata, Madhya Pradesh, Maharashtra, Mumbai, Odisha, Punjab, Rajasthan, Tamil Nadu (including Chennai), UP-East, UP-West and West Bengal.	8.074

9	Level '56'	V-CON Mobile & Infra Ltd.	Punjab	0.021
<b>Total</b>				<b>31.328</b>

# - In the table above, LSA i.e. name of area of operation for respective TSPs is mentioned. However, Levels/ Sub-levels are allocated SDCA-wise to TSPs. It may be noted many TSPs may not be providing access/ fixed-line service in one or more SDCA in any given LSAs.

\$ - All the sub-levels listed against the TSPs may not be allocated for all SDCAs. In other word, different LSA/ SDCA may have different sub-levels from the list of sub-levels allocated to the TSPs.

2.24 The allocation of sub-levels for fixed line services is performed on SDCA basis by the DoT to various Telecommunication Service Providers (TSPs). The sub-levels assigned to different TSPs for each SDCA, along with the corresponding available spare codes, are compiled and provided in [Annexure-III](#). For 12 SDCAs, which exhibit higher utilization, the tabulated details of spare sub-levels and

numbering resources are presented in Table 2.8 below. Even for these 12 SDCAs, it is evident from the table that there is an ample supply for future allocation to TSPs as compared to the present numbers allocated by TSPs.

**Table 2.8: SPARE SUB-LEVELs for future allocation**

SDCA CODE	SDCA NAME	LSA	COMBINED DATA of ALL TSP		Telecommunica tion Identifiers utilized by all TSPs from the sub-levels allocated by DoT to them (as on 31.12.2022)	Telecommuni cation Identifiers available for further allocation to TSPs based on spare sub- levels
			Sub-levels allocated by DoT to different TSPs	Spare sub-levels for future allocation

## **II. (b) Utilization of unused sub-Levels out of Level Allocated to TSPs**

2.25 The utilization report of various sub-levels of level '2' such as 20, 21, 2x, 2xx, etc for 12 SDCA was sought from one TSP, it is found that some sub-levels have zero utilization that can be withdrawn for allocation to other TSPs. For example, in Gurugram and Ghaziabad there appears to be around 5 lac and 4.5 lac unused numbering resources, that can be withdrawn from one particular TSP for allocation to other TSPs. Details are annexed at **Annexure- IV**.

## **III. Migration to LDCA Based Numbering Scheme**

2.26 The national telecom network in India has been divided into 2645 SDCAs distributed in 322 LDCAs under total 22 LSAs. The SDCA codes consist of 2/3/4 digits while the subscriber number is of 8/7/6 digits, respectively. For fixed line the telecom identifiers are allotted to TSPs SDCA wise. However, for the cellular mobile network

mobile telecommunication identifier is of 10 digits and allotted to a TSP for the LSA for which it has the license to operate in.

2.27 The numbering plan in a country also should be in sync with the switching plan and routing plan. Currently, with technological advancements, most TSPs have shifted their switching capabilities in fixed wireline services' network from the SDCA level to the LSA level. TRAI had earlier issued '*The Telecommunication Interconnection (Second Amendment) Regulations, 2020*' on 10.07.2020, defining the level of interconnection for PSTN-to-PSTN connectivity as follows:

- (a) *Within a service area, the location of Point of Interconnect (POI), for calls between PSTN and PSTN or between PSTN and NLD network, shall be at such place as may be mutually agreed between the interconnection provider and the interconnection seeker.*
- (b) *In case the interconnection provider and the interconnection seeker fail to agree under sub-regulation (1), the location of POI, for calls between PSTN and PSTN or between PSTN and NLD network, shall be at LDCC.*

*Provided that carriage charge for carriage of calls from LDCC to SDCC and vice versa, as applicable, shall be paid by the interconnection seeker to the interconnection provider:*

*Provided further that the existing POIs at the SDCC level, for calls between PSTN and PSTN or between PSTN and NLD network, shall remain in operation for a period of at least five years or till such time the interconnected service providers mutually decide to close such POIs, whichever is earlier:*

2.28 Thus, both the technological advancements and the regulatory regime envisage handling of PSTN traffic at a higher level. As per above mentioned TRAI regulation, the shift from SDCA to LDCA level interconnection will mandatorily happen in July 2025. This can facilitate implementation of an LDCA based numbering plan. If the interconnection levels are further shifted at LSA level, the fixed line numbering plan can be designed to follow LSA based numbering scheme. However, this will require change in network routing design across all network nodes in India. The issues involved would need to be examined. It may also involve change in the existing customer numbers leading to hardships and inconveniences to customers, Moving from SDCA based numbering scheme to LDCA based numbering scheme may also involve challenges in routing of emergency calls to the nearest emergency call handling centers.

2.29 While examining the potential transition from the current SDCA-based numbering scheme to LDCA or LSA-based scheme for fixed lines, it is important to consider that any alteration to the numbering scheme must prioritize safeguarding consumers interests and convenience of not imposing an unwarranted financial burden due to change of numbers while ensuring minimal disruption to the operations of TSPs.

#### **IV. Uniform Dialing Pattern of 10 Digit for both Fixed Line and Mobile Services**

2.30 For fixed-line services, PSTN employs an open numbering system, where the number of digits required to dial for local calls and inter-circle/STD calls differs. The subscriber numbers for fixed-line services range from 6 to 8 digits, contingent on the length of the

SDCA codes. It's worth noting that the same numbering series can be allocated in different SDCAs. In contrast, the Private Land Mobile Network (PLMN) for mobile services adheres to a closed numbering system, as outlined in the National Numbering Plan (NNP) of 2003. This means that all 10 digits must be dialed for calls within India. Mobile numbers in this system are unique, non-repetitive, and can be categorized as a non-geographical numbering scheme.

- 2.31 In accordance with the discussion in paragraph 2.17, it is observed that out of 2645 SDCAs, 1722 exhibit a utilization rate of less than 1% for the combined numbering resources allocated to all TSPs. To optimize resource allocation, unutilized numbering series from these SDCAs can be allocated in areas with higher utilization, if dialing of fixed line numbers with SDCA codes is mandated. This involves a shift in the dialing pattern for fixed line subscriber numbers, necessitating a closed numbering scheme with prefix '0' and dialing of 10-digit numbers (SDCA Code + Subscriber Number) for all calls (including local calls) between fixed lines. If such a scheme is implemented, sub-levels with prefixes from other SDCA codes where there are zero or very few subscribers, can be considered for allocation anywhere in India. While this strategy appears promising for creating ample numbering resources, the implementation challenges across the diverse access networks of various TSPs need to be examined. It will also involve synchronized implementation of change in fixed line dialing all over the country from a designated date. Consequently, a thorough examination of the merits, demerits, and challenges associated with this proposal is imperative before proceeding further.

## **V. Prospective Solution for SIP and PRI bulk allocation**

2.32 The possible solutions to deal with the problem of SIP & PRI bulk allocation can be –

(a) Imposing restrictions on bulk allocation and implementing vigilant monitoring practices to avert the depletion of numbering resources and/ Or

(b) Considering a revenue-based framework for the allocation of numbering resources to TSPs.

2.33 Some of the possible solutions for addressing fixed line telecom identifier resource problem have been discussed above. A combination of the above discussed possibilities can also be thought off. There may be other possible solutions as well. The Authority would, therefore, like to know the views of the stakeholders on the likely options discussed above as well as on other possibilities. The Authority would also like the stakeholders to provide a detailed analysis of their suggestions along with expected costs and benefits.

2.34 In view of the aforesaid, the Authority would like to know the views of the stakeholders on the following questions:

**Q1 Are there any TI resource shortages envisaged in the near future due to the presently adopted SDCA based fixed line Telecom Identifier scheme? Is there a need to revise the criterion prescribed by DoT for allocation of additional Telecommunication Identifier (TI) resources for fixed line access services? Please provide answers with detailed justification.**

- Q2** How can the (a) Spare SDCA codes and (b) Unused sub-levels out of the levels allocated to TSPs be best utilized to cater for future requirements of TIs for fixed-line access services? Please provide a detailed answer.
- Q3** As is the case currently with mobile numbers, in order to ensure availability of TIs for fixed lines, should 10-digit closed numbering scheme be made applicable to fixed line also? Please provide answers with detailed justification.
- Q4** Will migrating to LDCA based TI scheme address the constraints in SDCA based fixed line TIs? Please provide answers with detailed justification.
- Q5** What are the other possible options, if any, to address the currently envisaged constraints in TI resources for fixed lines in an efficient manner? Please provide your answers with a detailed proposition (*including technical challenges, changes required in handling, routing, interconnection and termination of emergency services and other essential calls and associated cost-benefit analysis*). Supportive documents, if any, may also be provided to justify your answer.
- Q6** Is bulk allocation of TI by few TSPs for providing SIP and PRI based services likely to create TI resources shortage in near future? If yes, what are the suggested means to address this issue? Please, provide your answer with supportive data.

## **C. MSC Codes for Mobile Services**

2.35 Mobile networks employ a distinctive numbering scheme to differentiate mobile numbers from fixed line numbers. In India's

cellular mobile services, the MSISDN comprises three parts: the CC (Country Code), NDC (National Destination Code), and SN (Subscriber Number). The CC denotes the country, the NDC identifies the PLMN, and the SN uniquely identifies the subscriber within the network. It is a closed numbering system for cellular mobile services and all the 10 digits (NDC+SN) should be dialled for calls within India. However, dialling prefix '0' is mandatory for initiating fixed to mobile calls. The 5-digit NDC is referred to as the MSC code. The allocation of 5-digit MSC codes is made to the TSPs, which caters to 1 lakh customers. The allocation is done in batches of 10 MSC codes, which caters to 1 million subscribers. As per DoT letter dated 08 November 2017, the following Visitor Location Register (VLR) criterion is followed for allocation of MSC code numbering series:

**Table 2.9: VLR Criterion for Allocation of MSC Codes**

S. No.	Numbers Allocated (N)	VLR Figure (V) as %age of Number Allocated (V/N)
1	Less than 3 million	Subject to minimum of 40%
2	3 Million to less than 6 Million	Subject to minimum of 45%
3	6 Million to less than 8 Million	Subject to minimum of 50%
4	8 Million	Subject to minimum of 55%
5	9 Million	Subject to minimum of 60%
6	10 Million to less than 15 Million	Subject to minimum of 63%
7	15 Million to less than 20 Million	Subject to minimum of 66%
8	20 Million to less than 25 Million	Subject to minimum of 68%
9	25 Million and above	Subject to minimum of 70%

2.36 TRAI had earlier issued recommendation on “Ensuring Adequate Numbering Resources for Fixed Line and Mobile Services” dated 29<sup>th</sup> May 2020. TRAI had recommended dialling prefix '0' while making a

call from a fixed line number to mobile number. It was also recommended that after exhausting all the surrendered numbering resources, the existing SDCA codes starting with '6', '3', '4', and '2', may be used for mobile services by suffixing with '0', '1', '8', and '9'. Initially, existing SDCA code of level '6' may be used followed by levels '3', '4', and '2', successively. Similarly, after exhausting all the numbering resources using the earlier steps the spare codes listed in the NNP 2003 may be used for mobile services. Initially, spare code of level '6' may be used followed by levels '3', '4' and '2', successively. This approach resulted in the generation of nearly 2.544 billion numbering resources for mobile services. Table 2.12 displays a breakdown of mobile numbering resources generated, categorized by level.

**Table 2.10: Mobile Number Resources Using Levels '2', '3', '4', and '6'**

Level	From Spare codes	From SDCA codes	Total
<b>Level 2</b>	157 M	337.2 M	494.2 M
<b>Level 3</b>	513 M	194.8 M	707.8 M
<b>Level 4</b>	317 M	273.2 M	590.2 M
<b>Level 6</b>	593 M	158.8 M	751.8 M
<b>Total</b>	<b>1580 M</b>	<b>964 M</b>	<b>2544 M</b>

Where M=Million

2.37 DoT has conveyed its acceptance of the above recommendations. The current reference from DoT does not seek recommendations on mobile numbering resources and therefore it is presumed that DoT envisages no shortage in this regard and therefore no specific question on mobile numbering resources is being raised in this consultation paper. However, the stakeholders can provide their comments on this issue, if any, as part of the last question which seeks comments on any other related issues.

#### **D. Need for defining fixed time duration for reuse of inactive TI resources.**

2.38 Telecom Consumer Protection (Sixth Amendment) Regulation (TCPR) (2 of 2013)<sup>7</sup> of TRAI prescribes the guidelines for Deactivation of Cellular Mobile Telephone connection due to non-usage, Automatic Number Retention scheme for pre-paid consumers and Safe Custody scheme for post-paid consumers. The Regulation also defines the following terms for Cellular Mobile connection: -

- (i) **Activity** - *means a voice call (outgoing or incoming) or video call (outgoing or incoming) or an outgoing SMS or a data session (upload or download) or usage of Value-Added Services or payment of rental in case of post-paid connection or any other usage, as may be specified by the service provider, as an activity.*
- (ii) **Non-usage** - *means absence of an activity.*

2.39 The TCPR 2013 has prescribed that no prepaid mobile connection shall be deactivated due to non-usage for a minimum period of 90 days or such longer period as prescribed by the service providers. The regulation further encompasses provisions for an automatic number retention scheme tailored for prepaid customers, a safe custody scheme applicable to postpaid customers, a stipulated grace period for re-activation (15 days) and a framework for communicating pertinent information to consumers.

2.40 In order to promote safe banking practices and avoid occurrences of any financial fraud, DoT vide letter no. 800-21/2015-AS-II<sup>8</sup> dated 20 April 2017 has further prescribed that the Cellular Mobile telephone

---

<sup>7</sup>[https://www.trai.gov.in/sites/default/files/Sixth\\_Amedment\\_21\\_FEB\\_2013.pdf](https://www.trai.gov.in/sites/default/files/Sixth_Amedment_21_FEB_2013.pdf)

<sup>8</sup><https://dot.gov.in/sites/default/files/20.04.2017.PDF?download=1>

connection of subscribers deactivated for non-usage / disconnected on the request of subscribers, shall not be allocated to any subscribers till the expiry of minimum period of 90 days or *such longer period as may be specified by the licensee*, from the date of deactivation / disconnections. The above instruction provides an opportunity to TSPs to keep such numbering resources unutilized for an unspecified period without putting them into re-use. Telecom identifiers needs to be efficiently and judiciously reused to avoid any shortages.

- 2.41 TRAI collects the data on monthly basis from all the wireless service providers regarding the mobile subscribers' details including the service suspended pending disconnection. The format for collection of aforementioned data is as shown below in the Table 2.9.

**Table 2.11: Format for reporting - Mobile subscribers in HLR, service suspended pending disconnection, etc.**

Circle	Total IMSIs in HLR	Test Cards & Service Cards	Employees	Stock in Hand / in distribution channels (Active cards)	Subscriber Retention period expired	Service suspended pending disconnection including active but idle SIMS	Subscribers in HLR	Rural Subscribers
Andhra Pradesh								
Assam								
--								
--								

2.42 TRAI also requested all the wireless access service providers to provide the segregated details about numbering resources being categorized under 'Service suspended pending disconnection' based on the following duration of suspension: (i) less than 90 days, (ii) less than 180 days but more than 90 days, and (iii) more than 180 days. The details of data so collected has been provided in the Table 2.10 below.

**Table 2.12: Mobile Service Suspension Rate: Percentage of Suspended Mobile Connections with respect to the Numbers Reported to TRAI**

Sr. No.	Service Provider's Name	No. of Mobile number as reported to TRAI (as on 31.10.2023) (in Million)	No. of mobile connections falling in the period of <90 days	No. of mobile connections on which service has been suspended.		Total mobile connections on which service has been suspended (A+B) (in Million)	Percentage of total mobile connections suspended w.r.t. numbers reported to TRAI
				(as on 30.11.2023)			
				(90 <= Period <180 days) (A)	(Period >= 180 days) (B)		
1	TSP-1	378.13	26.82	13.99	71.31	85.3	22.56%
2	TSP-2	93.04	0.27	0.003	0.21	0.213	0.23%
3	TSP-3	1.95	0.017	0.049	0.11	0.159	8.15%
4	TSP-4	0.0024	0.000071	0.000055	0.000196	0.00025	10.46%
5	TSP-5	452.379	-	-	0.000008	0.000008	0.00%
6	TSP-6	225.49	-	16.39	117.08	133.47	59.19%
	Total	1150.98	27.11	30.42	188.72	219.14	19.03%

2.43 It can be inferred from the data furnished by TSPs that huge amount of numbering resources are being accounted for under 'service suspended pending disconnection' category by the TSPs. It can be seen from the above table that two TSPs have **22.56%** (85.3 million) and **59.19%** (133 million) of their held mobile numbering resources falling under the suspended connections category. In total, 219.14 million numbers (which is 19.03% of the total numbers reported to

TRAI) are under '*service suspended pending disconnection*,' out of which, 188 million numbers (which is 16.4% of the total numbers reported to TRAI) have been suspended for more than 6 months. Given the restricted availability of numbering resources, there is a need to prioritize the efficient utilization of these resources. One of the possibilities to achieve the same is by withdrawing and promptly recycling numbers that have been suspended for more than 6 months.

2.44 However, for fixed line numbering resources, aspects of deactivation for non-usage/ disconnection on the request of subscriber is not defined. This has led to the suboptimal recycling of fixed line numbering resources. One of the approaches can be to revise/introduce appropriate definitions for '*inactive connection*,' for reuse of telecommunication identifiers for fixed-line and Cellular Mobile services.

2.45 In view of the aforesaid, the Authority would like to know the views of the stakeholders on the following questions.

**Q7 Is there a need to introduce appropriate definition for 'inactive connection' for fixed-line services and the exact time duration after which, TIs associated with these inactive connections can be put to reuse? Is there also a need to revisit the definition of 'inactive connection' for Mobile services? Please provide your answers with detailed justification and suggested definition.**

#### **E. Allocation of TI resources on chargeable basis.**

2.46 As of now, TI resources for both mobile and fixed-line services are allocated to service providers free of charge. The ownership of the

numbering space resides with the government, granting service providers usage rights over the designated number resource during the tenure of their licenses. It is evident that numbers represent an exceedingly valuable public resource which is not infinite. Simply adhering to strict criteria for assigning numbering resources might not ensure judicious and efficient use of freely allotted numbering resources by service providers. One way of ensuring judicious and efficient use of any finite public resource is by imposing charges while allocating it. Efficient utilization can be further ensured by introducing penal provision for those holding numbering resources with low utilization.

- 2.47 The Telecommunications Act, 2023 has following provision related to charging of telecom identifiers:

*“The Central Government may, subject to such terms and conditions, including fees or charges as may be prescribed, allot telecommunication identifiers for use by authorised entities.”*

- 2.48 The allocation of numbering resources in some of the countries worldwide is done on a chargeable basis, covering various categories such as mobile numbering resources, vanity numbers, and numbers for national interest. Based, on the information available on the public domain for various countries, the details of method adopted for the charging the Telecommunication Identifiers in various countries including the above is summarized below in the table 2.13:

-

**Table 2.13 Charges for Telecommunication Identifier in various Countries**

Sr. No.	Name of country	Method adopted	Existing charges
1	<b>Australia<sup>9</sup></b>	Application charges, Annual Numbering Charges and auction for smart numbers	<ul style="list-style-type: none"> <li>• Total Annual Numbering Charge (ANC) revenue target for 2024 is \$60 million from numbers held by providers.</li> <li>• The base number charge for the year 2023 was \$0.6080904673 (for a ten-digit number).</li> <li>• The ANC does not apply to the Geographic numbers, community service numbers.</li> </ul>
2	<b>Singapore<sup>10</sup></b>	Bidding for Choice Number Levels, Different charges fixed for different services.	<ul style="list-style-type: none"> <li>• The minimum bid price is set at S\$500,000 for a choice number level of the format 'AAAA XXXX' (e.g. '6666 XXXX') and \$150,000 for all other choice number levels.</li> <li>• Numbers with certain identifiable patterns in the last 4 digits are identified as "Golden Numbers." The 8-digit PSTN/mobile golden numbers ending with '0000' and '9999' are reserved for national interest purposes.</li> <li>• PSTN and Cellular Golden Number* fee is S\$ 50 and Paging Golden Number fee is S\$D 30 With 486 Golden Numbers in a number level (i.e. 10,000 numbers), each PSTN, cellular, IPT or UCDO number level is charged at \$24,300. Correspondingly, each paging number level is \$14,580.</li> </ul>

2.49 While it can be contended that numbering resources are not marketable commodities, it remains undeniable that certain numbers, particularly those with specific numbering sequences attributing to easy identification of allotted numbering resource, have higher demand and are referred to as *Vanity/Fancy/Premium Numbers*. For instance, one of TSP conducts auctions for vanity numbers for mobiles (for both postpaid and prepaid) as well as landline and FTTH connections. These numbers have combination of digits which gives a special look to the number. These numbers are segregated into different patterns depending on their sequence of repetition and representation. TSP has divided the vanity numbers and their charges into 3 categories. Vanity numbers are to be sold only through e-auction process. In case the vanity numbers remain unsold after certain auction cycles, they can be sold under open sale category. Level-1 Plus & Level-1 Category numbers are to be sold under open sale category only after 3 e-auction cycle on last successful e-auction price plus applicable taxes for similar pattern number in respective/any circle (As per availability of numbers in the respective circle). Categorization & base/minimum price for vanity

---

<sup>27</sup>[https://eng.sdfi.dk/Media/638022868804652495/Act%20on%20Electronic%20Communications%20Networks%20and%20Services\\_oct2022.pdf](https://eng.sdfi.dk/Media/638022868804652495/Act%20on%20Electronic%20Communications%20Networks%20and%20Services_oct2022.pdf)

numbers are decided by the concerned Telecom Circle. A representation of some of the numbers which are being treated as vanity numbers by one of TSP is shown below in table 2.14. Service providers charge their subscribers for allocating ‘vanity numbers’ across mobile, fixed-line, and FTTH connections.

**Table 2.14: Pattern of Vanity numbers along with their Base Price**

	<b>Pattern</b>	<b>Description</b>	<b>Sample No</b>	<b>Base Price</b>
1	<b>ABCDE 99999</b>	Numbers with Last 5 digits identical	<b>82771 99999</b>	50000
2	<b>ABCDE XXXXX</b>	Numbers with last 5 digits 7's	<b>82771 77777</b>	25000
3	<b>ABCD XXXXXX</b>	Numbers with Last 6 digits identical	<b>8277 111 111</b>	22000
4	<b>A XYZ XYZXYZ</b>	A group of 3 digits repeats thrice	<b>8 762 762762</b>	10000
5	<b>ABCDE ABCDE</b>	1st 5 digits Repeats for next 5 digits	<b>82775 82775</b>	10000
6	<b>ABCD Ascending</b>	Numbers with Last 6 digits in ascending order	<b>82 77 234567</b>	10000
7	<b>ABCDE Ascending</b>	Last 5 digits in ascending order	<b>87628 12345</b>	7000
8	<b>ABCDEF 1111</b>	Last 4 digits identical	<b>948030 1111</b>	7000
9	<b>AB WXYZ WXYZ</b>	A group of 4 digits repeats twice	<b>94 8311 8311</b>	5000
10	<b>ABCD WX WY WZ</b>	Last 6 digits of 3 consecutive double digit numbers	<b>9481 02 03 04</b>	5000
11	<b>ABCD XY XYXY</b>	A group of 2 digits Repeats thrice	<b>9483 07 07 07</b>	5000
12	<b>ABCDEF 1008</b>	Number last 4 digits ending with 1008	<b>948180 1008</b>	5000
13	<b>ABCD XXX YYY</b>	Repetition of grp of 3 digits in last 6 digits	<b>82 77 111 999</b>	4000

2.50 The ownership of numbering resources resides with the government, and it is evident that these numbers hold immense value as a public asset. Presently, service providers are not obligated to remunerate DoT for the numbering resources allocated to them. However, it is apparent that many service providers capitalize on the market demand by offering vanity numbers or highly coveted numbers at premium rates and even resort to conducting auctions to maximize their revenue from such number allocations. Furthermore, a significant number of service providers levy charges on subscribers

for acquiring preferred numbers. While it is true that a portion of the revenue generated from number sales is contributed as a percentage of the Adjusted Gross Revenue (AGR), however the aforementioned practices can not only lead to inefficient utilization of numbering resources but may also result in hoarding of numbering resources by the service providers. Hence, it may be prudent to consider charging the TSPs with a nominal fee against numbering resource allocated. Some possible mechanisms for charging these resources are as follows:

- Imposing a **one-time charge** per number or per numbering resource block being allocated
- Imposing **an annual recurring charge** for each numbering resource allocated to the service provider including de-activated numbers of prior allocation but pending reuse.
- Allocating numbering series excluding the **vanity numbers** for free, with the government conducting centralized auctions for the vanity numbers.
- Impose some financial disincentive (FD) on TSPs who keep holding to X% or more of the allocated TI resources unused beyond a certain time frame. A provision can also be made for TSPs to surrender certain contiguous unutilized numbering resources back to DoT from the allocated numbering resource.

2.51 However, implementing charges for This might entail certain downsides. One major disadvantage is that the charges are likely to be passed on to customers by the service providers. In view of the aforesaid the Authority seeks views of the stakeholders on the following questions:

- Q8 (a) Whether charges should be introduced for existing and newly allocated TI resources to ensure their efficient utilization? If yes, what should be the charging mechanism and applicable charges? Please provide detailed justification along with supportive documents, if any.**
- (b) Should a financial disincentive be imposed upon TSPs for retaining X% or more of the allocated TIs remaining as unutilized beyond a certain timeframe? If yes, please specify the X% with suggested disincentive mechanism and retention timeframe with detailed justification?**
- Q9 What is the minimum contiguous range of unutilized TIs which the TSPs should be allowed to surrender for mobile and fixed-line services.**

#### **F. M2M Code – 13-digit numbering**

2.52 In its recommendations on “*Ensuring Adequate Numbering Resources for Fixed Line and Mobile Services*” dated 29<sup>th</sup> May 2020, the Authority had inter-alia recommended that “***All the SIM based M2M connections using 10-digit mobile numbering series should be shifted to the 13-digit numbering series allocated by DoT for M2M communication; at the earliest***”. At present, DoT allocates 13-digit numbering series for SIM based M2M devices, which consist of 2-digit M2M identifier, 4-digit license identifier, and 6-digit device number. DoT has issued the 3-digit M2M identifier codes: 559, 575, 576, 579 and 597 and presently only ‘575’ is used as M2M identifier code. The Allocation criteria has been defined vide DoT letter No. 16-07/2017-AS-III/M2MIPart-11124/48 Dated: 22/06/2022.<sup>28</sup>

---

<sup>28</sup><https://dot.gov.in/sites/default/files/Criterion%20for%20M2M%20numbering%20resources.pdf?download=1>

2.53 With five codes 559, 575, 576, 579 and 597 as M2M identifiers, theoretically:  $5 \times 10^{10} = 50$  billion numbers can be generated, each M2M identifier code shall generate 10 billion identifiers. However, at present only '575' is used as M2M identifier code. DoT has been allocating 4-digit licensee identifier and 6-digits Device Number (1 Million).

**Table 2.15: Format for M2M allocation**

Country Code 2 digits	M2M Identifier 3 digits	Licensee Identifier 4 digits	Device Number 6 digits (1 Million)	LSA
91	575	XXXX	YYYYYY	Any from 22 LSAs

2.54 Analysis of the data showcased above in context of the above mentioned five stipulated M2M identifiers indicates that the prospect of facing any impending constraints regarding allocation of M2M codes looks improbable. However, the Authority would like to know the views of the stakeholders on the following:

**Q10 Are there any constraints envisaged in TI resources and its allocation for Machine-to-Machine (M2M) services? If yes, what changes should be incorporated to cater for its future requirements? Do support your answer with detailed justification.**

## **G. Level '1' Short Codes**

- 2.55 In the intricate landscape of the Indian telecommunication infrastructure, Level 1 short codes emerge as pivotal assets for prompt and direct access to critical services and vital information. Characterized by concise three to six-digit numerical sequences, these short codes help in establishing instantaneous connections to a diverse array of services and organizations. Primarily designated for emergency scenarios, Level 1 short codes function as rapid conduits, enabling immediate linkages to indispensable services like police, fire, and medical assistance, thereby enhancing the responsiveness of emergency communication networks. Level 1 short codes exhibit adaptability across sectors, finding utility in government services for direct citizen access to information and services, thereby streamlining public service delivery.
- 2.56 Extending beyond emergency response, Level 1 short codes also play a foundational role in customer service paradigms, serving as direct pathways for users to access helplines, expedite query resolutions, and manage various service aspects efficiently. Their ubiquitous use for routine tasks, such as balance inquiries and data usage checks, underscores their pivotal role in augmenting user experience and operational efficacy within the telecommunication sector.
- 2.57 The efficacy and popularity of Level 1 short codes hinge on their inherent simplicity and immediacy, providing users with an easily recallable means to access a plethora of services without the encumbrance of protracted dialling sequences. This simplicity proves especially critical in emergency situations, where swift connections are paramount.

2.58 The activation of Level '1' short codes necessitates an open configuration across all Telecommunication Service Providers (TSPs) networks, with each TSP facilitating public access. The entire procedural sequence, commencing from an organization's initiation of a request to the eventual assignment of Level 1 short codes, is conducted offline and managed manually by the Department of Telecommunications (DoT). The existing protocol employed by DoT for the allocation of Level '1' short codes is tailored to exclusively designate these codes to Central/State Government Departments. This allocation is contingent upon the recommendations furnished by the Chief Secretary/Principal Secretary of the pertinent Department/Ministry within the State or Central Government as per the information provided by DoT vide its letter on NNP dated 25.04.2023 (Annexure-V).

2.59 In its reference, DoT has elucidated challenges associated with the allocation of short codes, attributing them to a substantial upswing in solicitations from both governmental and non-governmental entities. This surge underscores the imperative for instituting a methodical allocation protocol, especially concerning short codes earmarked for emergency services and public welfare initiatives. Additionally, DoT has underscored the exigency for effective use of precious numbering resource for Level-1 services in context of the requirement of the country.

2.60 TRAI had formally requested allocation data of 'Level 1' codes from the DoT. It is noteworthy that 3-digit short codes are primarily earmarked for emergency and essential services, as delineated in Table 2.16. The available pool of short codes comprises 100 possibilities for 3-digit codes and 1000 for 4-digit codes. However,

SDCA codes originating with a digit '1' are kept excluded from the potential list of short codes eligible for allocation. Presently, based on the short codes data furnished by the DoT, approximately 13 codes for 3 digits and 109 codes for 4 digits have been allotted. The inventory of 3-digit short codes is detailed as follows:

**Table 2.16: 3-Digit level '1' Short Codes for essential and emergency services**

S. No.	3-digit Short Code allocated	Purpose	Availability
1	100	Police	Pan-India
2	101	Fire	Pan-India
3	102	Ambulance service	Pan-India
4	104	Health Information Helpline	Few States/UTs
5	107	Emergency Information services	Pan-India
6	108	Emergency Disaster Management Services	Pan-India
7	112	Emergency call	Pan-India
8	138	Premium enquiry services Value added services	Pan-India
9	139	Central Integrated Inquiry System	Pan-India
10	149	Enquiry of Public Road Transport Utility	Pan-India
11	166	m-Governance services	Pan-India
12	181	Chief Minister helpline	Pan-India
13	182	Railway security helpline	Pan-India

2.61 From the data furnished by DoT, it is apparent that several services that had been allotted short codes have either ceased to operate or have merged with other service codes. For example, a multitude of short codes, including 138, 182, 1310, 1311, 1320, 1321, 1322, and 155210, were originally designated for the Ministry of Railways. Presently, all these codes have been streamlined into a unified code,

namely 139. Furthermore, certain codes have undergone migration to Free phone service starting with '1800' series. Upon analyzing the data provided by the DoT on short codes across India many short codes are not even accessible from both fixed line and mobile and can be closed. This highlights highly inefficient utilization of the limited level-1 resources. It also indicates that government organizations get a short code allocated for services and fail to intimate when the services cease to operate. Sometimes after the initial euphoria around a service fade with time, citizens forget the short codes. No calls are made on such codes and even the government organizations withdraw the resources allocated for the service. The non-operational short codes should be withdrawn and reallocated.

- 2.62 Short codes, typically comprising 3 or 4 digits, exhibit a user-friendly characteristic, facilitating facile memorization and expeditious dialling. Conversely, the practicality diminishes significantly when dealing 5- or 6-digit codes, owing to their inherent complexity and the challenge they pose in terms of memorization. When a 6-digit short code is dialled from a fixed line along with 4-digit SDCA code, the user-friendliness diminishes. This is attributed to the shared 6-digit configuration between the short code and the fixed wireline number typical to that SDCA, introducing a potential source of confusion. Therefore, several lengthier short codes have become non-operational, and some have been replaced by free phone services. Opting for toll-free numbers characterized by easily discernible patterns, rather than 5 or 6-digit short codes, contributes to a more user-friendly dialling experience. Specific instances detailing these findings concerning short codes for pan-India utilization have been illustrated in **Annexure- VI**.

2.63 The DoT has been allocating numbering resources (including level-1 numbering resource ranging from 3 to 6-digit length) to government and non-government entities (including TSPs), free of cost. Analysis of allocated volume of short codes has revealed that numerous institutions have been assigned short codes at the state level, but a substantial proportion of these codes currently remain inactive, indicating towards inefficient utilization of these valuable Level-1 numbering resources. In a 10-digit numbering scheme, at three-digit telecom identifier blocks almost 10 million resources. For example, if 197 is allocated for particular use, then indicators 197-00-00000 to 197-99-99999 cannot be allocated to anyone else. Thus, use of 3 digit 1-level identifier renders 10 million identifiers unusable. Similarly, a 4-digit level-1 identifier will leave 1 million identifiers unusable; a 5-digit level-1 identifier will leave 100 thousand identifiers unusable and so on. In a numbering scheme where the overall total number of identifiers is limited, it is thus apparent that judicious allotment of level-1 identifiers is a must. In order to ensure effective utilization of such resources, it is imperative to explore the possibility of allocating short codes to organizations on a chargeable basis.

2.64 The challenges outlined above underscores the need for adopting specific practices to ensure the effective utilization of premium level-1 resources and to derive maximum benefits from them. Designating level-1 services as premium services, with charges applicable to be paid for its retention period and usage, can help to optimize the allocation, retention, and re-utilization of this scarce premium numbering resource. In addition, the allotment of level-1 identifiers needs to be restricted. For example, the allocation of all 3/4-digit short codes within the range of 100 to 1999 (inclusive of existing codes used by private/non-government entities) can be proposed to

be exclusively reserved for ongoing and futuristic use by government entities or for government-initiated/enlisted services such as emergency services and helpline services. Some of these allocations may be kept exempted from levying any charges.

2.65 The details of how some of the countries are dealing with allocation of short codes is provided below: -

**I. SINGAPORE**

In Singapore, IMDA has exclusively designated '99X' number range from Level '9' for emergency and essential services such as the Police, fire brigade, and ambulance. It appears there are only 10 numbers for these services in Singapore. Further, IMDA Singapore allocates 4/5-digit short codes from Level 1. These Level 1 short codes are allocated for providing special services and International Direct Dial (IDD) service to customers. These special services include calls for operator assistance, service enquiries, M2M services, Internet dial-up, voice information, and IN services.

For allocation purposes, access codes of the form "1XXX," comprising 4 digits, are divided into two pools - Pool A and B. Codes in Pool B possess recognizable patterns and are generally considered more desirable than those in Pool A.

- a. Pool A access codes comprise numbers ranging from 1300 to 1399, 1500 to 1599, 1600 to 1699, and 1800 to 1899, excluding the numbers in Pool B. A first-come-first-served principle is adopted in the assignment of Pool A access codes through a balloting process without any charge. In this process each applicant will randomly draw an access code from the access codes available in Pool A
- b. Pool B access codes, which consist of patterns such as 1YXX, 1Y1Y, and 1YY1 (where Y = 3, 5 – 8, and X = 0 to 9), are

allocated through a bidding process. However, if only one bid is received, the applicant can secure a Pool B access code by placing a minimum bid of \$50,000.

## II. EUROPEAN COUNTRIES

In **Belgium**<sup>29</sup>, the Belgian Institute for Postal Services and Telecommunications (BIPT) imposes administrative fees for application and yearly recurrent fees for the allocation of short codes. In 2024, €18,779 is charged as the annual fee for a single short code of the form 1YXX (with Y being any digit other than 0, 1, 7, 8, or 9), while €7,512 is charged for short code of the form 1YXX (with Y being either 7 or 8). Additionally, there is a €1,503 administrative fee for the application process for both types of short codes.

The Communications Regulatory Authority of the Republic of **Lithuania**<sup>30</sup> (CRA) allocates a short four-digit telephone number at €52.42 per month and a short five-digit telephone number at €5.24 per month.

The **Netherlands**<sup>31</sup> Authority for Consumers and Markets (Autoriteit Consument & Markt) allocates harmonized European short numbers. The allocation incurs a one-time fee of €939 per issue, with an annual cost of €176 per issue.

In **Switzerland**<sup>32</sup>, codes for accessing special services or for call control addresses are allocated individually by the Federal Office of Communications (OFCOM). An administrative fee of CHF 420.00 is

<sup>30</sup>[Numbering - Lietuvos Respublikos Ryšių reguliavimo tarnyba \(rrt.lt\)](https://www.lietuvosrespublikosryšiyreguliavimotarnyba.lt/en/numbering)

<sup>31</sup>[Requesting Numbers and Codes Telecom Providers | ACM.nl](https://www.acm.nl/en/numbering)

<sup>32</sup>[https://www.bakom.admin.ch/dam/bakom/en/dokumente/bakom/telekommunikation/nummerierung\\_telefonie/nummernbloecke\\_und\\_kennzahlen/allgemeine\\_informationen\\_zur\\_zuteilung\\_von\\_nummernbloecken\\_und\\_kennzahlen.pdf.download.pdf/E164-Information-EN-20210101.pdf](https://www.bakom.admin.ch/dam/bakom/en/dokumente/bakom/telekommunikation/nummerierung_telefonie/nummernbloecke_und_kennzahlen/allgemeine_informationen_zur_zuteilung_von_nummernbloecken_und_kennzahlen.pdf.download.pdf/E164-Information-EN-20210101.pdf)

charged for the allocation of a code, along with an annual administrative fee of CHF 200.00.

### **III. AFRICAN COUNTRIES**

**TANZANIA**<sup>33</sup> - Tanzania Communications Regulatory Authority has specified '1XX' range codes for emergency services and facilities offered by Telecommunication operators. There are four distinct categories for Value Added Services SMS 5-digit short codes. These categories comprise GOLD, SILVER, BRONZE, and Ordinary VAS SMS Codes, arranged in descending order of memorability, with GOLD being the most memorable and Ordinary being the least. Allocation of GOLD, SILVER, and BRONZE codes is determined by the applicant's preference, considering that each category incurs different registration fees. Ordinary codes, on the other hand, are allocated sequentially within their respective categories and according to availability.

**RWANDA**<sup>34</sup>- A similar categorization of short codes, as followed in Tanzania, is implemented by the Rwanda Utilities Regulatory Authority (RURA). Four-digit short codes used for Customer Information Service, Customer Care, and Helplines are divided into GOLD, SILVER, BRONZE, and Ordinary categories, and are issued to individuals and entities upon successful submission of an application fee and annual authorization charges.

**UGANDA**<sup>35</sup> - Uganda National Numbering Plan defines short codes either 3 or 4 digits long and Uganda Communication Commission

---

<sup>33</sup>[https://www.tcra.go.tz/uploads/text-editor/files/National%20Numberin%20Plan%202022\\_1661167863.pdf](https://www.tcra.go.tz/uploads/text-editor/files/National%20Numberin%20Plan%202022_1661167863.pdf)

<sup>34</sup>[https://www.rura.rw/fileadmin/onlinesca/Shortcodes\\_categories.php](https://www.rura.rw/fileadmin/onlinesca/Shortcodes_categories.php)

<sup>35</sup><https://www.ucc.co.ug/short-codes/>

(UCC) responsible for managing all numbers within the plan. Certain services, such as Emergency Services, Safety Services, Customer Service inquiries, and Billing-related inquiries, are exempt from authorization fees. However, there is an Authorization fee of US \$10,000 per annum for USSD-based services and an Authorization fee of US \$2,000 per annum for SMS and MMS-based services. Additionally, application fees of US \$250 and a one-time initial entry fee of US \$1,000 are applicable alongside the authorization fee.

**NIGERIA<sup>36</sup>**- The Nigerian Communications Commission (NCC) holds sole responsibility for the allocation of numbering resources within the country. Charges for short codes vary depending on their intended use. For example, banks acquiring short codes are required to pay an allocation fee of ₦10,000,000, along with a renewal fee of ₦10,000,000. Conversely, short duration codes designated for seasonal promotions incur a lower financial burden, with an allocation fee of ₦250,000 and a corresponding renewal fee of ₦250,000.

**ALGERIA<sup>37</sup>** -The Postal and Electronic Communications Regulatory Authority (ARPCE) in Algeria allocates short codes on a chargeable basis. Short numbers with four digits (starting with 3) are primarily dedicated to value-added voice services, while five-digit short numbers (starting with 6) are dedicated to value-added SMS services. These short codes are categorized into Platinum, Gold, Silver, and Regular categories. For a Platinum category 4-digit short code, an annual fee of DZD 2,000,000 is charged for a single code, while the

---

<sup>36</sup>[National Numbering \(ncc.gov.ng\)](http://ncc.gov.ng)

<sup>37</sup>[Numbering - arpce.dz](http://arpce.dz)

same length short code is available at DZD 500,000 in the regular category.

Many other countries like Malawi, Ghana, Zambia<sup>38</sup> are also allocating short codes on chargeable basis.

#### **IV. USA**

In the United States, standard and interoperable short codes typically consist of five or six digits. Five-digit codes are assigned within the range of 20000 to 99999, while six-digit codes fall within the range of 200000 to 999999. These short codes are allocated through a leasing process facilitated by “Iconectiv” (the registry service provider) who operates under an agreement with the Common Short Code Administration and Cellular Telecommunications and Internet Association (CTIA).

For the acquisition of a Select short code, where the user selects the specific code, the lease rate stands at \$1,000 per month. Alternatively, for a Random code, assigned by the system, the lease rate is set at \$500 per month. Lease durations are available for periods of three, six, or 12 months, with the full lease payment required prior to code activation. It is important to note that all fees incurred are non-refundable.

2.66 In light of above discussions, the stakeholders are requested to give their comments on the following issues with justification: -

**Q11 What constraints/issues if any, are currently envisaged in the procedure being followed for allocation of Level-1 short codes by DoT? Should the level-1 short codes be reserved for government**

---

<sup>38</sup><https://macra.mw/wp-content/uploads/2020/08/Numbering-Fee-Schedule-August-2020.pdf>

**entities only? Will allocation of level-1 short codes on chargeable basis solve the issues identified in aforementioned question? What are the other possible suggestions for judicious allocation and effective utilization of level '1' numbering resources? Please support your answer with detailed justification.**

**Q12 What are the global best practices being followed for judicious allocation and effective utilization of short codes (akin to Level-1 short codes in India)?**

#### **H. TIs for other services (as mentioned in DoT reference)**

2.67 In addition to challenges faced in allocation of fixed-line and level-1 numbering resources, DoT in its reference to TRAI had also sought recommendations on the numbering plan aspects and allocation criteria related to following services.

- i. Allocation of MCC and MNC for Captive Network Non-Public (CNPN)
- ii. M2M numbering resource.
- iii. Signaling Control Point (SCP) codes
- iv. National Signaling Point (SP) Codes for SS7 signaling.
- v. Intelligent Network Services like free phone, Premium rate service, international free phone etc.
- vi. Number portability codes.
- vii. Any other number based emerging services.

The current use and allocation of the telecom identifiers of these services have been dealt with in following sections.

##### **i. Service Control Point (SCP) Codes**

- 2.68 The Service Control Point (SCP) codes, comprising three digits ranging from 000 to 999, are designated by DoT to service providers specifically for their Intelligent Network (IN) platforms. The SCP is responsible for querying the service data point (SDP), which houses the actual database and directory. Leveraging the database from the SDP, the SCP identifies the geographical number to which a call should be directed.
- 2.69 Presently, SCP codes are allocated individually to each IN platform within every circle or Licensed Service Area (LSA) for the respective service providers. However, due to service shutdowns by certain licensees, some of the SCP Codes remain unutilized. Consequently, to optimize the effective utilization of these SCP codes, DoT has initiated the withdrawal of codes allocated to these licensees, as detailed in its letter<sup>39</sup> numbered 16-1/2023-AS-111/8 dated 02.11.2023. The updated list of currently operational SCP codes within the network of Service Providers (SPs) was also enclosed with the aforementioned letter.
- 2.70 Details of utilized, withdrawn and available SCP codes are shown in Table below. Upon meticulous examination of the data arrayed herein, it is inferred that the prospect of encountering any immediate constraints remains unlikely as per the present tabulation. Out of the 1000 available SCP codes, only 13.9% of them are utilized. However, the Authority would like to know the views of the stakeholders on this.

---

<sup>39</sup><https://dot.gov.in/sites/default/files/WITHDRAWAL%20OF%20SCP%20CODES%20AND%20PRESENT%20STATUS%20OF%20ALLOCATION%20OF%20SCP%20CODES-1.pdf?download=1>

**Table 2.17: Utilization of SCP Codes**

<b>S. No</b>	<b>Total Number of Possible SCP Codes</b>	<b>Total Number of SCP Codes Utilized (by different TSPs in different LSAs)</b>	<b>Number of SCP codes withdrawn from TSPs by DoT</b>	<b>Total Number of SCP Codes available for allocation</b>
<b>1</b>	<b>1000</b>	<b>139</b>	<b>235</b>	<b>861</b>

**ii. Signalling Point (SP) codes:**

2.71 Signalling Point Codes are utilized to identify various network elements within the telecommunications infrastructure. SP codes facilitate the precise identification of distinct network components enabling efficient network operations, thereby ensuring seamless connectivity and streamlined communication across diverse telecommunications networks. DoT allocates SP codes to TSPs for Mobile Switching Centre (MSC)/ Gateway MSC (GMSC)/ Mobile Switching Centre Server (MSS), Standalone Signal Transfer Point (SSTP), Landline Switches and National Long Distance (NLD)/International Long Distance (ILD)/ Trunk Automated Exchanges (TAXs). SP codes for mobile operators are of length 4 (9000 series) or 5 digit (10000 series). NNP 2003 also listed the SP codes for future allocation. As per the data provided by DoT, TSP-wise details of utilized and unutilized SP Codes are shown in table 2.18 below. Given that TSPs are yet to utilize 1532 SP codes that have been allocated to them and the fact that there are ample of SP codes that are with the licensor that can be allocated in future, the likelihood of facing any imminent limitation towards allocation of SP codes in near future seems unlikely.

**Table 2.18: Number of utilized and unutilized SP codes from the codes allocated to service providers by DoT.**

Sr. No.	Access Service Provider	No. of utilized SP codes	No. of un-utilized SP codes
1	TSP-1	722	30
2	TSP-2	585	9
3	TSP-3	8	3
4	TSP-4	156	5
5	TSP-5	80	23
6	TSP-6	43	0
7	TSP-7	278	181
8	TSP-8	12	21
9	TSP-9	0	2
10	TSP-10	3	2
11	TSP-11	6	2
12	TSP-12	306	1254
<b>Total</b>		<b>2199</b>	<b>1532</b>

However, the Authority would like to know the views of the stakeholders on the following question:

**Q13 Are there any constraints/challenges envisaged with regards allocation and utilization of TI resources for Service Control Point (SCP) codes and Signaling Point (SP) codes respectively? If yes, what changes should be incorporated to cater to future requirements of the aforesaid codes? Do support your answer with detailed justification.**

### **iii. Location Routing Number (LRN) Codes**

2.72 Mobile Number Portability (MNP) serves as a mechanism allowing subscribers to retain their current mobile number while transitioning from one service provider to another. It extends nationwide, enabling

movement from the existing LSA to any other LSA within either the same service provider's network or to a different service provider altogether. Integral to this process is the Location Routing Number (LRN), a unique routing number assigned to each operator (based on technology) within a service area by the DoT. This number is associated with the ported mobile number in the centralized Number Portability Database (NPDB). The LRN codes, consisting of 4 digits, along with the 10-digit ported number, are then broadcasted to all Access Providers and International Long-Distance Operators for updating their respective local Number Portability databases. Whenever a call is made to the other operator's network, the originating network first queries the number portability database to obtain its LRN, after which the call is routed directly to the destination mobile network/number.

- 2.73 The available spare LRN codes (as per the data provided by DoT vide letter no. 16-16/2022-AS-III/163/ dated 25-04-2023) reserved for future use, as well as the codes allocated by DoT to service providers, are attached in **Annexure VII and tabulated in Table 2.19 below.**

**Table 2.19: Utilized, Spare and % Utilization of LRN Codes**

Number of LRN Codes utilized	Number of Spare LRN Codes available for allocation	% Utilization
173	215	45%

- 2.74 A 4-digit LRN code should result in 10,000 such codes. However, as can be seen from the data provided by DoT that has been presented above, only 215 LRN codes have been shown available for allocation. One LRN code is allocated to an access service TSP for each Licensed

Service Area (LSA). This means that the current spare LRN codes can cater to roughly 10 more TSPs assuming that such TSPs will take licenses for all 22 LSAs. Recently, DoT has withdrawn bulk codes allocated to the licensees who have shut down their mobility operations, as detailed in its letter<sup>40</sup> numbered 16-5/2017-AS-III/LRN/97/93 dated 31.05.2023. It has also come to the notice of the Authority that LRN codes are being allotted to MVNO and IP-based access service TSPs also<sup>41</sup>. Considering the aforementioned, there is a possibility that 215 spare LRN codes might not be sufficient to cater to the future needs. Therefore, the Authority would like to seek views from the stakeholders on the following question:

**Q14 What constraints/ challenges are anticipated with regards TI resources for Location Routing Number (LRN) codes to cater for futuristic requirements? What changes, if any, should be incorporated to effectively address its future needs? Do support your answer with detailed justification.**

#### **iv. Intelligent Networks (IN) services - Free Phone, Premium rate service, ITFS etc.**

2.75 Intelligent Network is a Telecommunication Network Architecture for provisioning of advanced Services which are not normally available in the switching systems. IN Services add value to Voice and Data Bearer Services through Number Translation, Alternate Billing etc. IN services include free phone service, Universal Access Number, televoting, Premium Rate Service, Virtual Private Network, and others.

---

<sup>40</sup><https://dot.gov.in/sites/default/files/LRN%20Codes%20withdran%20letter.pdf?download=1>

<sup>41</sup><https://dot.gov.in/sites/default/files/Allocation%20of%20LRN.pdf?download=1>

2.76 The Free Phone service is provided without any charge to the calling user, and all applicable charges are borne by the called party only. The structure of free phone services may consist of 8 to 13 digits, and the format is as follows: -

1800+YYY+IN number ('YYY' = SCP code)

2.77 The 1860 number series is used for Universal Access Services (UAS), where calls to these numbers are chargeable. A call to a service subscriber will be paid by the calling party or split between the calling and called party. The structure of UAS may be of 11 to 14 digits, and the format is as follows: -

Local: 1860 + YYY + IN number ('YYY' = SCP code)

2.78 The 0900 number series is designated for Premium Rate Service, providing recorded information or live conversation for callers. This service allows subscribers to offer information to callers at a premium calling rate, where callers are charged a higher rate than normal calls. The charges are then divided between the service provider (content provider) and the network operator. This service enables professionals and information providers to offer advice, consultations, forecasts in various fields, fortune-telling, share market consultations, job consultations, and information on sports, leveraging the telecommunications network for swift communication. 0900 + XXX + IN Number where ('XXX'= SCP code).

2.79 NNP-2003 has specified only two access methods for calling numbers outside India i.e.

(i) International Service: DoT has issued sub-level '00' for international dialing. It will be followed by country code and will be of 17 digits with the following format:

CC + NDC + SN

(ii) International Toll-Free Number: DoT has issued International Toll-Free Number Series '000800' to be utilized by telecom service providers with the following format:

000 + 800 + IIC (3-digits) + XXXX (4-digits)

Where IIC is Identity Code allocated by DoT to IFS service provider. No other access method shall be used for termination of calls outside India except above two access methods.

2.80 From the data provided by DoT, there does not appear to be any constraint as far as telecom identifiers for IN services is concerned. However, the Authority would like to obtain the views of the stakeholders on the following: -

**Q15 What constraints/ challenges are anticipated in the allocation of TI resources for Intelligent Network (IN) Services like Free Phone service, Premium services, International Toll-Free Service (ITFS), etc.? What changes, if any, should be incorporated to cater for its future requirements? Do support your answer with detailed justification.**

**v. MCC-MNC (Mobile Country Code-Mobile Network Code) for Captive Network Non-Public (CNPN)**

2.81 The allocation and management of MCC-MNC codes are particularly significant in CNPNs, as these codes are fundamental for distinguishing and routing communications among different private cellular networks. The MCC represents the country in which a mobile network is registered, while the MNC further refines this identification to the specific mobile network within that country. This unique combination of codes is instrumental in creating a distinct

identifier for each mobile operator globally, ensuring seamless communication and data transfer within private cellular networks. As CNPNs continue to evolve and expand, the meticulous allocation and utilization of MCC-MNC codes become paramount for the efficient functioning of private cellular networks and the broader ecosystem of connected devices and services.

- 2.82 The 15-digit numbering scheme that is being is used for MCC-MNC Code for CNPN is as given below:

**“999 (3-digit fixed for CNPN) + XXX XXX (6 digit for Service providers) + XXX XXX (6 digit / 1 million users/ services)”**

Since six digits have been kept for identifying a CNPN, there does not appear to be any constraint as far as telecom identifiers for MCC-MNC for CNPN is concerned. However, the Authority would like to know the views of the stakeholders on this.

- 2.83 In view of the above, stakeholders are requested to give their comments on the following issues with justification: -

**Q16 What constraints are envisaged towards TI resources for MCC-MNC codes being used for Captive Non-Public Networks (CNPNs)? What changes, if any, should be incorporated to cater for its future requirements? Do support your answer with detailed justification.**

**Q17 Apart from the questions posed above, are there any additional issues being experienced by the TSPs regarding the aspects of the National Numbering Plan 2003 and TI resources allocation criteria? If yes, then the same may please be brought out in detailed elaboration with supporting documents.**

## **CHAPTER- III**

### **Issues for Consultation**

3.1 Stakeholders are requested to provide their answers/comments on the following issues. It may be noted that the answers/comments should be supported with justification in detail.

- Q1 Are there any TI resource shortages envisaged in the near future due to the presently adopted SDCA based fixed line Telecom Identifier scheme? Is there a need to revise the criterion prescribed by DoT for allocation of additional Telecommunication Identifier (TI) resources for fixed line access services? Please provide answers with detailed justification.**
- Q2 How can the (a) Spare SDCA codes and (b) Unused sub-levels out of the levels allocated to TSPs be best utilized to cater for future requirements of TIs for fixed-line access services? Please provide a detailed answer.**
- Q3 As is the case currently with mobile numbers, in order to ensure availability of TIs for fixed lines, should 10-digit closed numbering scheme be made applicable to fixed line also? Please provide answers with detailed justification.**
- Q4 Will migrating to LDCA based TI scheme address the constraints in SDCA based fixed line TIs? Please provide answers with detailed justification.**
- Q5 What are the other possible options, if any, to address the currently envisaged constraints in TI resources for fixed lines in an efficient manner? Please provide your answers with a detailed**

**proposition (*including technical challenges, changes required in handling, routing, interconnection and termination of emergency services and other essential calls and associated cost-benefit analysis*). Supportive documents, if any, may also be provided to justify your answer.**

- Q6 Is bulk allocation of TI by few TSPs for providing SIP and PRI based services likely to create TI resources shortage in near future? If yes, what are the suggested means to address this issue? Please, provide your answer with supportive data.**
- Q7 Is there a need to introduce appropriate definition for 'inactive connection' for fixed-line services and the exact time duration after which, TIs associated with these inactive connections can be put to reuse? Is there also a need to revisit the definition of 'inactive connection' for Mobile services? Please provide your answers with detailed justification and suggested definition.**
- Q8 (a) Whether charges should be introduced for existing and newly allocated TI resources to ensure their efficient utilization? If yes, what should be the charging mechanism and applicable charges? Please provide detailed justification along with supportive documents, if any.**
- (b) Should a financial disincentive be imposed upon TSPs for retaining X% or more of the allocated TIs remaining as unutilized beyond a certain timeframe? If yes, please specify the X% with suggested disincentive mechanism and retention timeframe with detailed justification?**

- Q9** What is the minimum contiguous range of unutilized TIs which the TSPs should be allowed to surrender for mobile and fixed-line services.
- Q10** Are there any constraints envisaged in TI resources and its allocation for Machine-to-Machine (M2M) services? If yes, what changes should be incorporated to cater for its future requirements? Do support your answer with detailed justification.
- Q11** What constraints/issues if any, are currently envisaged in the procedure being followed for allocation of Level-1 short codes by DoT? Should the level-1 short codes be reserved for government entities only? Will allocation of level-1 short codes on chargeable basis solve the issues identified in aforementioned question? What are the other possible suggestions for judicious allocation and effective utilization of level '1' numbering resources? Please support your answer with detailed justification.
- Q12** What are the global best practices being followed for judicious allocation and effective utilization of short codes (akin to Level-1 short codes in India)?
- Q13** Are there any constraints/challenges envisaged with regards allocation and utilization of TI resources for Service Control Point (SCP) codes and Signaling Point (SP) codes respectively? If yes, what changes should be incorporated to cater to future requirements of the aforesaid codes? Do support your answer with detailed justification.

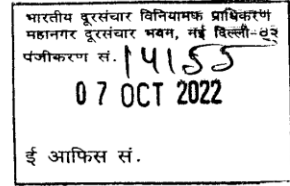

- Q14** What constraints/ challenges are anticipated with regards TI resources for Location Routing Number (LRN) codes to cater for futuristic requirements? What changes, if any, should be incorporated to effectively address its future needs? Do support your answer with detailed justification.
- Q15** What constraints/ challenges are anticipated in the allocation of TI resources for Intelligent Network (IN) Services like Free Phone service, Premium services, International Toll-Free Service (ITFS), etc.? What changes, if any, should be incorporated to cater for its future requirements? Do support your answer with detailed justification.
- Q16** What constraints are envisaged towards TI resources for MCC-MNC codes being used for Captive Non-Public Networks (CNPNS)? What changes, if any, should be incorporated to cater for its future requirements? Do support your answer with detailed justification.
- Q17** Apart from the questions posed above, are there any additional issues being experienced by the TSPs regarding the aspects of the National Numbering Plan 2003 and TI resources allocation criteria? If yes, then the same may please be brought out in detailed elaboration with supporting documents.

**ANNEXURE- I**  
**Refer para-1.12**

16-16/2022-AS-III/

/3062500/2022

Government of India  
Ministry of Communications  
Department of Telecommunications  
Access Services Wing  
20, Ashoka Road, New Delhi-110001

No. 16-16/2022-AS-III/ 123/233

Dated: 29-09-2022

To,  
The Secretary,  
Telecom Regulatory Authority of India,  
Mahangar Door Sanchar Bhawan,  
Jawahar Lal Nehru Marg,  
Old Minto Road, New Delhi.

**Subject: Seeking recommendation on revised National Numbering Plan (NNP)-regarding.**

Sir,

Kindly refer to the TRAI recommendations on "Ensuring Adequate Numbering Resources for Fixed Line and Mobile Services" dated 29<sup>th</sup> May, 2020. The recommendations of TRAI have been considered by Digital Communication Commission (DCC). The summary of TRAI recommendations, DCC decisions on respective recommendation and brief status of implementation is enclosed at **Annexure-I**.

2. In para 4.11(a) of aforesaid recommendations, TRAI had inter-alia recommended that '*a revised and new National Numbering Plan (NNP) should be issued at the earliest*'. This recommendation has been accepted by DoT.

3. DoT has also received requests from Telecom Service Providers (TSP), particularly M/s Reliance JIO and M/s Bharti Airtel, for additional fixed line resources. The recent requests from TSPs are placed at **Annexure II**. From these requests, it can be seen that there may be wire-line numbering resource constraints in Gurgaon and Noida/ Ghaziabad as well as in some other parts of country.

4. To ensure adequate numbering resources for wire line, pending revision of NNP, DoT has amended existing numbering resource allocation criterion vide DoT letter No. 16-03/2018-AS-III/MSD dated 08.08.2022 (**Annexure-III**). In this revision, a graded utilization criterion, similar to mobile numbering resources allotment, has been introduced.

5. To address the present and possible future constraints related to availability of adequate fixed line numbering resources arising out of rapid growth, a review of fixed line numbering plan is required after due consultation with stakeholders.

6. In addition, following points are also referred for examination and recommendations:

/3062500/2022

- a. Considering the competitive tariff plans offered by Access Service Licensees at LSA and Pan-India level, TRAI may examine the requirement for continuing with SDCA based Numbering Plan Area (NPA) as defined in NNP-2003 or could be to go for LDCA based numbering scheme from the present SDCA based numbering scheme.
  - b. DoT is getting large number of requests from Govt. and non-government organization for allocation of short codes. TRAI may examine global best practice and provide recommendation on effective use of precious numbering resources for level '1' services in context of requirement of the country.
7. Further, the numbering plan aspects and allocation criteria related to following services may also be considered in revised NNP: -
- a. Allocation of MCC and MNC for Captive Network Non-Public(CNPN)
  - b. M2M numbering resources (**Annexure-IV**).
  - c. Signaling Control Point (SCP) codes
  - d. National Signaling Point (SP) Codes for SS7 signaling(**Annexure-V**).
  - e. Intelligent Network Services like free phone, Premium rate service, international free phone (**Annexure-VI**) etc.
  - f. Number portability codes
  - g. Any other number based emerging services
8. In view of above, it is requested that revised National Numbering Plan may be recommended under Clause 11(1) (a) of the TRAI Act 1997 as amended by TRAI amendment Act, 2000, considering global best practices and DCC decisions on TRAI recommendations dated 29<sup>th</sup> May, 2020.
9. This issues with the approval of competent authority.

Encl: As above.

  
(Sunil Kumar Singhal)  
DDG (AS) 29/09/22

## Annexure-I

1. **Background:** DoT sought TRAI recommendations on strategies of National Digital Communication Policy, 2018, vide letter No. Dated 08.05.2019, on item 2.2(e) i.e.

“(e) Ensuring adequate Numbering resources, by

...  
ii. Developing a unified numbering plan for fixed and mobile services.”

2. TRAI has provided its recommendations dated 29<sup>th</sup> May, 2020 on ‘Ensuring Adequate Numbering Resources for Fixed Line and Mobile Services’
3. TRAI recommendations have been examined in DoT and summary decisions of DoT and current status is given below.

TRAJ Recommendation	Decision of Digital Communication Commission(DCC)	Status /Remarks
<p><b>2.</b></p> <p>a. Sparingly used sub-levels in level ‘2’, ‘3’, ‘4’, ‘5’, and ‘6’, may be withdrawn after seeking sub-level wise utilization from the TSPs providing fixed line services.</p> <p>b. Levels/ sub-levels allocated to some fixed line TSPs who have not launched their services even after one year of allocation, may also be withdrawn after seeking justification.</p> <p>c. These withdrawn levels should be reserved for future allocations for fixed line service providers.</p>	<p><b>Accepted.</b></p> <p>Only 20.584 million wireline connections are operational by 31st January, 2020. In 2017, few MSC codes were withdrawn from TSPs whose utilization percentage was less than 10%. Hence, the same criterion may be used.</p>	<p>DoT has issued directions to all TSPs vide DoT letter 16-16/2020-AS-III/25/1637 dated 20.11.2020 to seek the information of Un-utilized/underutilized MSC and wireline codes as DoT on annual basis in the formats defined in the letter.</p> <p><b>(Annexure-A)</b></p>
<p><b>3.</b> The Authority recommends that all the SIM-based M2M connections using 10-digit mobile numbering series should be shifted to the 13-digit numbering series allocated by DoT for M2M communication; at the earliest.</p>	<p><b>Accepted.</b></p> <p>DoT has allocated level identifiers ‘559’, ‘575’, ‘576’, ‘579’ and ‘597’ out of which only level identifier ‘575’ is utilized. TSPs have been instructed to shift the SIM-based M2M connections</p>	<p>Instructions already issued by DoT prior to the recommendation.</p>

	using 10-digit mobile numbering series to the 13-digit numbering series allocated by DoT.	
<b>4.</b> The Authority recommends that the mobile numbering resources surrendered by TSPs who have closed down their wireless operations, may be re-allocated to those TSPs who need more numbering resources.	<b>Accepted.</b> DoT is already allocating the mobile numbering resources surrendered by TSPs who have closed down their wireless operations to those TSPs who need more numbering resources.	DoT has been following the procedure prior to the recommendation.
<b>5.</b> The Authority recommends that the following scheme should be adapted for creation of sufficient numbering space:  a. Dial all fixed to mobile calls with the prefix '0'.  b. No change in dialing plan for fixed to fixed, mobile to fixed, and mobile to mobile calls.  c. A total time of one month may be given to all the TSPs to implement this scheme.  d. Suitable announcement may be fed in the fixed line switches to apprise the fixed line subscribers about the requirement of dialing the prefix '0' for all fixed to mobile calls. This announcement should be played whenever a subscriber dials a fixed to mobile call without prefixing '0'.  e. All the fixed line subscribers should be provided with '0' dialing facility.	<b>Accepted.</b>	DoT has issued directions to all TSPs vide DoT letter No. 16-16/2020-AS-III/24/636 dated 20.11.2020.  <b>(Annexure-B)</b>

<p><b>6.</b>The Authority recommends that:</p> <p>a. after exhausting all the surrendered numbering resources, the existing SDCA codes starting with '6', '3', '4', and '2', may be used for mobile services by suffixing with '0', '1', '8', and '9'. Initially, existing SDCA codes of level '6' may be used followed by levels '3', '4', and '2', successively.</p> <p>b. after exhausting all the numbering resources using the earlier steps, the spare codes listed in the NNP 2003 may be used for mobile services. Initially, spare codes of level '6' may be used followed by levels '3', '4', and '2', successively.</p>	<p><b>Accepted.</b></p> <p>a. First to utilize the spare SDCA codes listed in the NNP 2003 for mobile services after exhausting all the numbering resources using the earlier steps. Initially, spare codes of level '6' to be used followed by levels '3', '4', and '2', successively. This will make the availability of approximately 1571 million Numbering series. For example: When any landline subscriber dials the mobile number, it should be prefixed with '0'. Spare code level '610' can be dialed as 0610xxxxxxx, whereas, 'x' can be any number. This can be utilized for mobile numbers as these levels are not allocated as SDCA codes and there will be no requirement of change in routing of calls.</p> <p>b. SDCA codes starting with '6', '3', '4', and '2', will be utilized for mobile services by suffixing with '0', '1', '8', and '9' after utilizing the spare SDCA codes. This will create approx. 968 million mobile numbering series. For eg: existing SDCA code starting with level '6' i.e. '612' can be utilized as 0612AXXXXXX (where as 'A' shall be levels '0', '1', '8', and '9' and 'X' can be any number) as there are no levels allocated to Basic service providers with levels '0', '1', '8', and '9'.</p>	
--	---	--

7. The Authority recommends that the present criterion of utilization for allocation of the numbering resources should be continued.	<b>Accepted.</b>	Present allocation criterion is being followed.
8. The Authority recommends that sparingly used MSC codes (less than 10 percent utilization after 2 years of allocation) may be withdrawn and reallocated to another TSP whose subscriber base is growing. The working connections may be ported out.	<b>Accepted.</b>	Instructions issued vide DoT letter 16-16/2020-AS-III/25/1637 dated 20.11.2020  <b>(Annexure-A)</b>
9. The Authority recommends that the Annual Return on utilization of the numbering resources should be submitted to the Numbering Plan Administrator by all the TSPs, both for mobile as well as fixed line numbering series. The format used for filing this return may be similar to the details presently given by the service providers for allocation of fresh block of numbers. In addition to annual submission, this return should be submitted every time the service providers make a request for fresh block of numbers.	a. TRAI recommendation regarding implementation of scheme of filing annual return for numbering resources is accepted.  b. However, recommendation of TRAI on the requirement of filling utilization of <i>entire numbering series at each time for request of additional number block is not agreed</i> to. Filing of utilization of entire numbering series would be voluminous and may not be required at each time the request for additional number block is made. The present method may continue for allocation of new numbering series.	Instructions issued by DoT letter 16-16/2020-AS-III/25/1637 dated 20.11.2020  <b>(Annexure-A)</b>
10. The Authority recommends that an automated allocation of numbering resources using number management system software may be introduced to speed up the process of allocation in an efficient and transparent manner. If needed, this work may be outsourced with overall control and supervision of the DoT.	<b>Accepted.</b>	DoT is in process to introduce Numbering Resource Management Module in Saral Sanchar Portal for efficient numbering resource management including utilization reporting.

<p><b>11.</b> The Authority recommends that:</p> <p>a. a revised and new National Numbering Plan (NNP) should be issued at the earliest.</p> <p>b. a consolidated addendum to the NNP should be issued every year, which should include all newly allocated numbering resources for fixed line as well as mobile services.</p> <p>c. a consolidated list of short codes should be issued at the earliest. The short code allocations which are not in use should be withdrawn.</p> <p>d. the consolidated list of short codes should be updated every year incorporating all withdrawals and new allocations.</p>	<p>a. TRAI recommendation at 3.10 (a) regarding the proposal of issuing new/ revised National Numbering Plan is accepted.</p> <p>b. Allocated numbering resources and short codes shall not be made part of National Numbering Plan but will be separately available on DoT website and shall be updated at regular intervals. With the above, NNP will not be required to be updated yearly.</p>	
---	---	--

4. Recently, DoT has amended new wireline numbering criterion to promote fixed line broadband services in India vide DoT letter No. 16-03/2018-AS-III/MSD dated 08.08.2022. In this criterion, graded criterion, similar to mobile numbering resources allotment, is introduced so that the growth of wireline is not hampered which will also ensure availability of sufficient spare numbering resources in the hands of TSPs for meeting customers' demand.

No. 16-16/2020-AS-III/25/ 6371

Dated: 20/11/2020

To,  
All Access Service Providers,

Subject: Un-utilized/underutilized MSC and wireline codes.

With reference to above subject, kindly intimate the following:

- i. MSC codes which are utilised less than 10% after 2 years of allocation in the format as enclosed in Annexure-I.
- ii. Less than 10% utilisation of level '2', '3', '4', '5', '6' and '7', in fixed line services in the format as enclosed in Annexure-II.
- iii. Services not launched after one year of allocation of MSC/fixed line codes.
- iv. The annual return on utilization of the numbering resources both for mobile as well as fixed line numbering series may also be submitted by 15<sup>th</sup> January of every year for the preceeding calendar year as of last week of December. The format for the same is attached as Annexure-III.

This is issued with the approval of competent authority.

No. 16-16/2020-AS-III/26/1640/

Dated: 25/11/2020

To,

All Access Service Providers,

**Subject:** Corrigendum to letter dated 20.11.2020 regarding modification of dialing pattern from fixed line numbers to cellular mobile numbers.

This is in partial modification to DoT letter No. 16-16/2020-AS-III/24/1636 dated 20.11.2020 regarding modification of dialing pattern from fixed line numbers to cellular mobile numbers. In this regard, the undersigned is directed to state that:

Time till 15<sup>th</sup> January, 2021 is allowed to all the TSPs to implement this scheme instead of 1<sup>st</sup> January.

The other contents shall remain same.

Dated: 20/11/2020

To,  
All Access Service Providers,

Subject: Modification of dialing pattern from fixed line numbers to cellular mobile numbers.

In order to ensure adequate numbering resources for fixed line and mobile services, TRAI recommendations dated 29.05.2020 on the subject has been accepted by the Department.

2. Following may be implemented:
  - i. Fixed to mobile calls shall be dialled with prefix '0'.
  - ii. Suitable announcement may be fed in the fixed line switches to apprise the fixed line subscribers about the requirement of dialing the prefix '0' for all fixed to mobile calls. This announcement should be played whenever; a subscriber dials a fixed to mobile call without prefixing '0'.
  - iii. All the fixed line subscribers should be provided with '0' dialing facility i.e. STD dialing facility.
3. Time till 1<sup>st</sup> January is allowed to all the TSPs to implement this scheme.
4. Compliance of the same may be intimated.
5. This is issued with the approval of competent authority.

Sub.: Allocation of additional Wireline Access Service Codes for Bokaro SDCA in Bihar LSA.

Reference: DoT Letter no. 16-03/2018-AS-III/MSO/345/1591 dated 23.10.2020

Dear Sir,

1. Please refer above mentioned DoT letter dated 23.10.2020, wherein DoT has mentioned that additional Wireline Access Service Codes will be allocated to the TSP on utilization of 80% of numbers actually by the way of activation of subscribers.
2. In this regards, it is to inform that RJIL has received utilization certificate dated 09.05.2022 from Bihar TERM cell (copy enclosed as Annexure) wherein the utilization of numbers has been certified as 80.93% for Bokaro SDCA in Bihar License Service Area which is as per above mentioned DoT circular dated 23.10.2020.
3. It is requested to kindly allocate the additional Wireline Access Service Code to RJIL for Bokaro SDCA in Bihar License Service Area at the earliest so that we can meet the demand of additional numbering resources required to on-board our rapidly growing customers.

Thanking you,

For Reliance Jio Infocomm Limited

Bihar LSA, DoT  
Patna(Bihar).

**Sub:- Allotment of additional Numbering Levels for Basic Access Services- 796 series, 31 series and 35 series in Bokaro SDCA by M/s RJIL.**

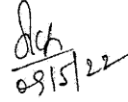

**Ref:- Letter No 16-03/2018-AS-III/MS/345/1591 dated 23.10.2020**

M/s RJIL has submitted an application to this office that the percentage of utilization of existing Basic Access Services numbering levels allocated to RJIL has reached to 80% utilization for Bihar LSA part of Bokaro SDCA.( Letter enclosed).

M/s RJIL has got three levels allocated for Basic Access Services for Bihar LSA as 796 Series, 31 series & 35 Series and has requested for additional numbering level of two digit such as 36 or 37 Series.

As per DoT Hq letter as reference above, the percentage utilization of these two series (796 Series, 31 Series & 35 Series) in Bokaro SDCA has been certified by this office, which is enclosed as **Annexure-A**.

This is being forwarded to you for further necessary action.

  
Director(C-2)  
DoT, Ranchi.

**Subject: Requirement of additional Wire Line Number Series in Gurgaon and Noida to Airtel.**

Reference Letter No: - File No: -800-21/2015-AS.II Dated 13.04.2017 & 20.04.2017

Dear Sir,

In respect of the above-mentioned subject, we wish to make the following submissions for your kind consideration:

1. Airtel has been allocated Wire line Number Resource starting digit 4. In Gurgaon (0124), and Noida (0120) SDCA having 3-digit STD Code, the complete level 4 has capacity of 10 lac numbering resources only.
2. We have taken up with Delhi Term Cell for reallocation of additional Wireline number resources for Gurgaon and Noida SDCA as the utilization of wire line number series allocated to Airtel has crossed 82% and 86% respectively as given below: -

SDCA (1)	Active Numbers (2)	Deactive (numbers with <90 days from disconnection & retained for same subscriber) (3)	Available Numbers (4)	Total Capacity (5)=(1+2+3)	Number Resource Used (6)=(2+3)	Utilization % (7)=(6/5)* 100
Gurgaon-0124	720945	103479	175576	1000000	824424	82.44
Noida--120	722512	137277	140211	1000000	859789	85.98

3. In this regard the wireline numbers disconnected in less than 90 days are not assigned to any other customer as these numbers have been retained for the same subscriber. This is similar to the guidelines (Annexure-1) issued by DoT for reallocation of deactivated/disconnected cellular mobile telephone connection of a subscriber as given below

*"The cellular mobile telephone connection of a subscriber deactivated for non-usage/disconnected on the request of subscriber. shall not be allocated to any other*

*subscriber till the expiry of a minimum period of 90 (ninety) days or such longer period, as may be specified by the licensee, from the date of deactivation/disconnection."*

4. In wireline services the subscribers are prepaid and postpaid akin to mobile services and therefore the deactivated numbers less than 90 days are retained for same customer. While calculating the Mobile number utilization these deactivated number resources are considered as used resources in the same manner while calculating the Wireline number utilization these deactivated number resources should be considered as used resources. But in absence of similar guidelines for wireline the Delhi Term cell has not considered these deactivated resources as used resources leading to denial of additional wireline resources while the utilization is above 80%.
5. In view of the above it is requested to issue guidelines/directions to considered these deactivated resources in wireline as used resources while calculating the utilization of number resource.

Sincerely,  
For Bharti Airtel Limited

No. 16-03/2018-AS-III/MSC/

Dated: 08-08-2022

Office Memorandum**Subject: Criterion for allotment of Wire-line numbering resources.****1. Background:**

- a. At present, wire-line numbering resources are allotted as per DoT letter No. 16-3/2018-AS-III/MSC/345/1591 dated 23.10.2020. As per extant criterion, additional wire-line numbering resources are allotted to Access Service Licensee on utilization, by way of activation of subscribers, of 80% of already allotted wire-line numbering resources.
  - b. Access Service Licensees have informed the Department that the wire-line numbering resources allotted to them exhaust quickly especially in smaller towns having 3-4 digits SDCA (Short Distance Charging Area) codes. Therefore, they are facing difficulties in activation of new subscribers due to existing numbering allotment criterion.
2. Now, to promote the proliferation of wire-line services, it has been decided to amend the extant criterion of 80% utilization. Accordingly, additional wire-line numbering resources shall now onwards be allotted based on following utilization criterion:

Sr. No	Wire-line Numbering resources allotted	Minimum subscriber activation required for seeking additional wire-line numbering resources
1.	10,000 to less than 50,000	50%
2.	50,000 to less than 1,00,000	55%
3.	1,00,000 to less than 5,00,000	60%
4.	5,00,000 to less than 10,00,000	70%
5.	10,00,000 and above	80%

3. Access Services Wing is in the process to initiate the allotment of numbering resources through Saral Sanchar Portal which will further streamline the procedure of

3054585/2022

allotment of additional numbering resources. In the mean-time, the extant procedure for allotment of additional numbering resources shall continue.

This issues with the approval of the competent authority.

No. 16-03/2018-AS-III/MS/345/1591

Dated: 23/10/2020

To,  
All Access Service Providers,

Subject: Criterion for allocation of Wireline Access Service Codes.

This is in modification to present criterion of allocation of Wireline Access Service Codes to Access Service Providers. In this regard, the undersigned is directed to issue following instructions:

- i. New Wireline Service Service Code shall be allocated on the basis of utilization of numbers allocated till date.
- ii. The data in the following format shall be certified by concerned LSA unit:

S No.	SDCA	Wireline level allocated (L)	Wireline Numbers Allocated (M)	Date of Allocation	Numbers utilized (N)	% utilized= N/M

- iii. The access service provider will first approach the respective LSA unit for certification of above data and then submit their requisition for Wireline codes to Access Services cell of DoT enclosing therewith the LSA units certified figures.
- iv. The additional codes will be allocated on utilization of 80% of numbers actually by the way of activation of subscribers.

This is issued with the approval of competent authority

Dated: 22/06/2022

No. 16-07/2017-AS-III/M2M/Part-I/124/148

To,

All Access Service Providers,

Subject: Criterion for allocation of additional 13 digit M2M numbering resources after the allocation of initial 5 million numbering resources.

This is in reference to the DoT letters dated 01.07.2016 and 09.12.2016 vide which it was approved to utilize 13-digit numbering series for SIM based M2M devices co-existing with 10-digit mobile numbering scheme. On the basis of the above letters, DoT issued 5 million 13-digit M2M numbering series per LSA to Telecom Service Providers vide letters dated 04.04.2018 and 29.08.2018 for commercial purpose.

2. The criterion for further allocation of 13-digit M2M numbering series to M2M service providers as follows:

- i. VLR criterion based mobile numbering series allocation is adopted for allocation of 13-digit M2M numbering resources as SIM would be used in similar way as mobile connections except for the addition of port in numbers and deletion of Port-out numbers as MNP is not allowed in M2M numbers.
- ii. The Access Service Provider(s) shall first approach the respective LSA field units for certification of VLR figures and then submit their requisition from LSA field units to DoT HQ enclosing therewith the LSA fields certified figures.
- iii. The allocation of M2M numbers will be in trench of 5 million at a time as compared to 1 million of mobile numbers allocation at a time presently.
- iv. 13-digit M2M numbering resources will be issued if the VLR figure reached the count (taking para (i) to (iii) into account) as below:

S No.	Numbers Allocated (N)	VLR Figure (V) as %age of Number Allocated (V/N)
1.	Less than 5 million	Subject to minimum of 40%
2.	5 Million to less than 20 Million	Subject to minimum of 45%

*S. K. Garg*

3.	20 Million to less than 50 million	Subject to minimum of 50%
4.	50 Million to less than 100 million	Subject to minimum of 55%
5.	100 Million to less than 150 million	Subject to minimum of 60%
6.	150 Million to less than 200 million	Subject to minimum of 65%
7.	200 Million and above	Subject to minimum of 70%
N= Number allocated		
V= VLR figure		

3. This is issued with the approval of competent authority.

No. 16-4/2011-AS.III/Vol I/5/

Dated : 22-02-2012

To

All Access Service Providers.

**Subject: Requisition for SP Codes from access service providers-regarding  
16-7/2015-AS-III(Part I)**

1/387

Requests for allocation of SP codes are received in DoT. While processing the requests, following have been observed:

- (i) Access service providers are using different terms for network elements e.g. MSS, GCS, MSC(GMSC), MGW, MGC etc.
  - (ii) Only some access service providers are furnishing the database for earlier allocated SP codes along with the application.
  - (iii) From the requests received it is not evident whether the earlier allocated SP codes have been exhausted or not.
2. Due to the above, repeated clarifications are required from access service providers and it takes lot of time in processing the requisitions.
3. Hence the following has been decided:
- (i) Hence forth in the requisitions for SP codes, the term 'MSC' will be used for basically the older version of switching system where both user part and the control part exist on single node. For newer version where MSC is split into MSC Server and MGW, the SP code will be allocated for signaling controller, which is part of MSC Server. A common term Media-Gateway Controller (MGC) should be used for this purpose. SP codes will not be allocated for MGW.
  - (ii) The requisition for a fresh SP code should be submitted along with the following information:
    - (a) Name of LSA .
    - (b) Name of network element for which the SP code is required .
    - (c) Address where the said network element is installed/proposed to be installed.

7/2/21 223

... case of requisition for change of address of previously allocated SP code, the DoT letter vide which the code was allocated should also be attached.

(iv) The requisition for (a) fresh SP code and (b) for change in location of SP code should have the **database for already allocated SP codes** for that LSA in a excel sheet in the following format as an enclosure:

Name of Service provider	Name of LSA	SP Code	Name of network element (NE) to which the code was allocated	The address for which the said SP code was allocated	DoT Letter No. and date	Is the said network element still working and at the same address	Final status, In use = 1, Other = 0
	16-7/2015	AS-III	(Part II)				

2/387

A soft copy of the database may also be provided for record

(v) An undertaking should be given in the requisition that all the previously allocated SP codes are in use i.e. have been assigned to network elements which are presently in operation (i.e. are live).

(vi) An allocated SP codes should be utilized within a period of 6-months from the date of allocation. If the allocated SP codes are not utilized within this period, then the same should be reported to DoT and surrendered.

Similarly, if a network element to which SP code was allocated has been de-commissioned and its use is not planned within a period of next 6-months, the allocated SP code should be surrendered.

(vii) An annual return on utilization of SP codes in the format given in para (iv) above should be submitted (soft and hard copy both) by each TSP, in the month of April for the previous financial year.

4. All access service providers are therefore requested to follow the procedure and instructions outlined herein above.

No.16-7/2012-AS-III/53/20

Dated: 22/01/2016

To,  
All Access Service Licensees/NLD/ILD Licensee

**Subject: Amendment to numbering plan for International Free Phone Service (IFS).**

Keeping in view of Multi operator ILD scenario and to ensure proper working of IFS for proper conduct of telegraphs and in exercise of power conferred under clause 3.21 of National Numbering Plan (NNP) 2003, the following shall be the revised dialing plan with effect from 1<sup>st</sup> February 2016:

000	+	800	+	IIC(3-digits)	+	XXXX(0000-9999)
<i>Access code for International VAS</i>		<i>Code for International Free Phone Service</i>		<i>IFS Access Provider Identity code. (IIC to be allocated by DoT to Authorized IFS Access Providers)</i>		<i>Subscriber number (To be assigned by IFS Access Providers)</i>

2. The Definitions referred in the above dialing plan are as per ITU-TE.152 and are as follows:

- (i) **2.1 IFS Access Provider:** IFS Access provider is a Recognized Operating Agency (ROA) in the country of origin of the call which is responsible for ensuring the establishment of access to the international freephone number in that country. ILD operator are IFS Access providers in India.
- (ii) **2.2 IFS Provider:** IFS provider is a Recognized Operating Agency (ROA) which provides the international freephone service to the IFS customer and is responsible for all relations with the IFS customer concerning the international freephone service. The Recognized Operating Agency (ROA) is the recognized Telecom service provider in its respective country.
- (iii) **2.3 IFS Customer:** The individual or entity who (or which) obtains an international freephone service from an IFS service provider, and is responsible for payment of all charges due to that IFS service provider.
- (iv) **2.4 IFS Caller:** The person who places a call to an international freephone number.
- (v) **2.5 Routing number:** A number format specified by the IFS service provider which identifies the called IFS customer and the originating country for routing purposes. The

international freephone number dialed by the IFS caller is translated in the country of call origination to this special routing number before the call is transferred to the IFS service provider.

3. IFS Dialing Scheme explanation
  - (i) To begin with, IFS access provider Identity code (IIC) shall be same as Carrier Access Code (CAC)/International Carrier Identification Code (ICIC) already allotted to ILD operators in India by DoT, prefixed with 0. Subsequent allotment of additional IIC codes will be made by DoT. Analysis of 3-digits IFS Access Provider Access Code (IIC) shall identify IFS Access Provider who has assigned IFS Access Number to the IFS Customer.
  - (ii) Subscriber Number 'XXXX' will be allotted by IFS Access Provider. The same number will not be repeated in any other country.
  - (iii) IFS Access provider shall abide by the provisions/scope of the services in the relevant licensee/regulations.
4. The amendment comes into effect from 01/02/2016.
5. Existing dialing plan prescribed vide Letter No. 6-3/92-PHM/PHT Vol. II dated 17.8.1999 shall coexist with the new plan for existing IFS customers.
6. Licensor reserves the right to amend NNP 2003 as required.

**Annexure – V**  
**[Refer para. 2.58]**

16-16/2022-AS-III/

I/3097954/2023

Government of India  
Ministry of Communications  
Department of Telecommunications  
Access Services Wing  
20, Ashoka Road New Delhi-110001

No. 16-16/2022-AS-III/163/

Date: 25-04-2023

To,

**Secretary, TRAI**  
Mahanagar Doorsanchar Bhawan  
Jawahar Lal Nehru Marg (Old Minto Road)  
New Delhi-110002

**Subject: Seeking recommendations of TRAI on revised "National Numbering Plan (NNP)" regarding.**

This has reference to TRAI's letter No. R-16/2 (1)/2022-NSL-I dated 08.02.2023 wherein DoT has been asked to provide additional information/ data, for initiating consultations with stakeholders, for submitting recommendations on National Numbering Plan details. The para-wise response of DoT in respect of TRAI's observation/remarks are as under:

**i. S. No. 1:** The consolidated list of SDCA wise allocated wireline numbering resources and utilization is enclosed as Annexure-I in the format provided by TRAI. The criterion for allocation of wireline numbering resources is enclosed as Appendix-A.

**ii. S. No. 2:** The consolidated list of Level '1' short code is enclosed as Annexure-II in the format provided by TRAI. Level 1 is reserved for accessing special services like emergency services, supplementary services, inquiry and operator-assisted services under National Numbering Plan-2003. The detailed allocation of various level '1' number range is given at Annex-IV in NNP-2003. Accordingly, following procedure is being followed by DoT for allocation of emergency services/ Short codes:

**a.** At present, short Codes are only allocated to Central/States Government Department based on the recommendation of Chief Secretary/Principal Secretary of concerned Department/Ministry in the State/Central Government. This criterion was followed based on TEC report on Efficient Utilization of Numbering Resources in India, which had stated that:

*"The committee recommends that the application for the need for level 1 short code may be approved by the Secretary of concerned Department/Ministry in the State/Central Govt."*

**b.** Also, with the single nationwide emergency response system using short code 112 being operationalized, all emergency calls like police, fire, ambulance are handled by specialized agents at Public Safety Answering Point (PSAP) in each State/UT. Separate short code for similar services will create ambiguity for

I/3097954/2023

person in emergency, accordingly, DoT is not allocating short codes to Private Hospitals anymore.

**iii. S. No. 3 (b):** DoT has allotted 5 sets of 3 digit identifiers i.e. 559, 575, 576, 579 and 597 vide letter No. 16-05/2015-AS-III/MS (Part)/154/223 dated 01.07.2016 followed by 4-digit Licensee Identifiers (for each TSP) starting from 1xxx to 9xxx while keeping rest 6 digits to be utilized by TSPs for its own allocation in the following format:

Country Code 2 digits	M2M Identifier 3 digits	Licensee Identifier 4-digits (10000 blocks)	Device Number 6 digits (1 Million)	TSP allocated
(+91)	575	2xxx	xxxxxx	TSP 1
		3xxx	xxxxxx	TSP 2
		4xxx	xxxxxx	
		5xxx	xxxxxx	
		6xxx	xxxxxx	
		7xxx	xxxxxx	
		8xxx	xxxxxx	
		9xxx	xxxxxx	TSP 8

Further, following procedure is followed for allocation of 13-digit M2M numbering series:

- a. **Allocation of M2M identifier:** Out of 5 sets of '3' digit identifiers, DoT had decided to utilize only one identifier i.e. '575' to begin with and keep the remaining four identifiers for future use.
- b. **Allocation of Licensee Identifier:** The 4-digit Licensee Identifier i.e. from 0000 to 9999 is to be distributed amongst all TSPs. Therefore, DoT had decided to allocate separate starting digit for each TSP as described below:
  - Level '2' - M/s BSNL
  - Level '3' - M/s RJIO
  - Level '4' - M/s Bharti Airtel
  - Level '5' - M/s Vodafone
  - Level '6' - M/s Idea
  - (Level '0', '1' and '9' for future use)

**In view of above, it is stated that with one M2M identifier, DoT can allocate around  $10^9$ , 13-digit M2M numbering series per TSP and with 5 Licensee Identifiers, DoT can allocate around  $5 \times 10^9$  13-digit M2M numbering series per TSP.**

The current allocation and the utilization of M2M numbering resources is enclosed as Annexure-III in the format provided by TRAI. The criterion for allocation of M2M numbering resources is enclosed as Appendix-B.

**iv. S. No. 3 (c):** The current TSP wise allocation and the utilization of SP and SCP codes are enclosed as Annexure-IV and Annexure-V respectively in the format provided by TRAI. The criterion for allocation of SP code numbering resources is enclosed as Appendix-C.

**v. S. No. 3 (e):** The 4-digit LRN codes are allocated to Access Service Licensee

I/3097954/2023

(s) LSA and technology wise for each mobile network from Levels 2, 3 and 4 only not pertaining to SDCA codes/area codes. The current LRN codes allocated to Licensee (s) are enclosed as Annexure-VI in the format provided by TRAI.

**S. No. 4 (i):** The annual return on utilization of the numbering resources for mobile as well as fixed line numbering resources, as submitted by TSPs till 15<sup>th</sup> January, 2022, is enclosed as Annexure-VIIIA and Annexure- VIIB. At present, DoT has not withdrawn any un-utilized/under-utilized MSC or wireline codes based on the data submitted by Licensee (s) in their annual return.

**S. No. 4 (ii):** The allocation and utilization of MSC codes in respect of mobile services is enclosed as Annexure-VII in the format provided by TRAI. The criterion for allocation of M2M numbering resources is enclosed as **Appendix-D**.

**2.** The amendments are issued in National Numbering Plan from time to time and a copy of such amendments are attached collectively as **Appendix-E**.

**3.** This is issued with the approval of competent authority.

**Signed by Sanchit Kumar  
Garg**

**Date: 25-04-2023 15:43:04**

**(Sanchit Kr. Garg)  
Assistant Director General (AS-III)

## **LIST OF ACRONYMS**

<b>Acronym</b>	<b>Description</b>
5G	5 <sup>th</sup> Generation
ACMA	Australian Communications and Media Authority
AGR	Adjusted Gross Revenue
ANC	Annual Numbering Charge
AR	Augmented Reality
BHD	Bahraini Dinar
BIPT	Belgian Institute for Postal Services and Telecommunications
CAC	Carrier Access Code
CC	Country Code
CHF	Swiss franc (Official currency of Switzerland)
CIC	Carrier Identification Code
CNPN	Captive Network Non-Public
CP	Consultation Paper
CTIA	Cellular telecommunications and Internet Association
DoT	Department of Telecommunications
DZD	Algerian Dinar
FTTH	Fiber to the Home
GMSC	Gateway Mobile Switching Centre
HLR	Home Location Register
HQ	Headquarters
ICT	Information and Communication Technology
IDD	International Direct Dialing
ILD	International Long Distance
IMDA	Infocomm Media Development Authority
IN	Intelligent Network
IoT	Internet of Things
IP	Internet Protocol
IPT	IP Telephony
ITFS	International Toll-Free Service
ITU	International Telecommunication Union
ITU-T	International Telecommunication Union- Telecommunication Standardization Sector
KD	Kuwaiti Dinar
LDCA	Long Distance Charging Area
LDCC	Long-Distance Charging Centre
LEs	Local Exchanges
LMG	Line Media Gateway
LRN	Location Routing Number
LSA	License Service Area
M2M	Machine-to-Machine
MCC	Mobile Country Code
MNC	Mobile Network Code
MNP	Mobile Number Portability

MSC	Mobile Switching Centre
MSISDN	Mobile Station Integrated Services Digital Network
MSS	Mobile Switching Centre Server
MVNO	Mobile Virtual Network Operator
NDC	National Destination Code
NLD	National Long Distance
NNP	National Numbering Plan
NPA	Numbering Plan Area
NPDB	Number Portability Database
NRMS	Numbering Resource Management System
NSN	National Significant Number
PLMN	Private Land Mobile Network
PLN	Polish zloty (National Currency of Poland)
POI	Point of Interconnect
PRI	Primary Rate Interface
PSTN	Public Switched Telephone Network
RURA	Rwanda Utilities Regulatory Authority
SCP	Service Control Point
SDCA	Short Distance Charging Area
SDCC	Short Distance Charging Centre
SDP	Service Data Point
SIP	Session Initiation Protocol
SN	Subscriber Number
SP	Signaling Point
SS7	Signaling System 7
STD	Subscriber Trunk Dialing
TAX	Trunk Automatic Exchange
TCPR	Telecom Consumer Protection Regulation
TDM	Time Division Multiplexing
TMG	Trunk Media Gateway
TI	Telecommunication Identifier
TRAI	Telecom Regulatory Authority of India
TSP	Telecommunication Service Provider
UCC	Unsolicited Commercial Communication
UCDO	User Centric Data-Only services
UL	Unified License
VAS	Value Added Services
VLR	Visitor Location Register
VR	Virtual Reality
