Subject: Suggestions related to minimum mobile Internet speed benchmark

Dear TRAI team,

It is highly suggested to make some benchmark related to mobile Internet speeds as Indian consumers suffer a lot using the conventional data speeds which are hardly in the range of 7-15 kbps (2G) downloading speeds. Even 3G speeds have been at the lower side when compared to global speeds.

Hence it is highly recommended to make some benchmark with 56 kbps for 2G and 1 Mbps for 3G as suggested by you.

Hoping that you will bring good changes in favor of consumers,

Regards,
Kunal Varaiya.
