Subject: Go forward to set a minimum speed of 2g and 3g

A minimum speed is necessary to save customers from cheating. 3g promises to give 7mbps but rarely gives 1mbps that too at night only.

Telecom companies provide eye catching details of data plans but after subscribing, customer has to regret for believing the telecom companies. 2g provides 10-12kbps, is that something called speed? 2g should atleast give 30 kbps.

If telecom companies can hike data charges than why should customers make compromise with speed.
