

**We provides** - # Hi Speed Broad Band #Internet Lease Line #WiFi Solution # VoIP Services # IP Tv

Reference- Press release No-29/2021

To,

Mr. Ravi Sinha

Secretary(I/O), TRAI.

Dear Sir,

As demanded the suggestion by the TRAI about exemption of the license fee on the revenue earned from fix line broadband connections in India or providing direct benefit transfer (DBT) to fix line broadband users across India.

I think the direct benefit transfer to user is the better option than to provide the exemption of the license fee because the mostly ISP hide the actual quantity of the connections and also DBT system discourages unauthorized ISP, are running in all India. He doesn't maintain the transparency on the numbers of customers and customer's services quality.

It has been seen that new changes are happening in the field of Telecommunications every day, now internet has become a very important thing and the number of ISP is also increasing but our rural areas are untouched for the long times. To bring internet revolution, it is necessary to increase the number of license holder ISP's even in rural areas. Our class A or B ISP does not focusing on these rural areas due to lack of resources while class C ISP can do a better in this area.

### **Our suggestions and benefits as below.**

1. DBT system will increase the no. of internet users and also inspired Business men's to take for own ISP license.
2. If the ISP License number is compulsory to write on ISP's bills, then the revenue income will promote.
3. IF Govt implement DBT system to encourage Internet Users then the no. of license is also increases then GST, AGR and other tax will increase. And good Business practice is Increase in Society.
4. Exemption of the license fee model grow only ISP profit but not profitable in promotion of broadband USERS.
5. If DOT De-Licensed V Band (57-64GHz) frequency that ISP can used advance technology for high speed (2.5Gbps, 1 Gigabit per second) high capacity wireless links, ideal for urban areas. links can be densely deployed in congested cities without interference, and without need for digging for cables and fiber optics, which can be costly, slow and highly disruptive.
6. To proliferation of fixed line Boradband Service ,Govt. Can provide by default Bank Loan to a NEW ISP Company at time of ISP License award with help of UDOF fund.

Therefore, if the committee agrees with our suggestion, then consider it in the coming time so that help in increase the density of broadband connectivity in across India.
